SAFETY PRECAUTION

The following precautions should be observed when servicing.

1. Since many parts in the unit have special safety related characteristics, always use genuine Hitachi's replacement parts.

Especially critical parts in the power circuit block should not be replaced with other makers.

Critical parts are marked with \triangle in the schematic diagram and circuit board diagram.

2. Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safe to operate without danger of electrical shock.

SPECIFICATIONS

Format :	VHS PAL Standard
Cassette :	VHS Type 60 min. 120 min. 180 min.
Recording :	Rotary Two Head Helical Scan Azimuth Recording
Tape Speed :	23.39 mm/sec.
Tape Width :	12.7 mm
Operation Temperature :	0°C to 40°C
Video :	PAL colour & CCIR monochrome signals 625 lines
Recording Time :	240 min. (with Hitachi E-240 cassette)
RF Output :	UHF channels 37 (30—39 adjustable)
Video Input :	0.5 to 2.0V p-p 75 ohm Unbalanced
Video Output :	1V p-p 75 ohm Unbalanced
S/N Ratio (Video) :	43 dB
S/N Ratio (Audio) :	43 dB
Horizontal Resolution :	Colour 240 lines
Mic Input :	—69 dB 1 Kohm
Audio Input :	—20 dB 50 Kohm
Audio Output :	—6 dB 500 ohm
Audio Frequency Range :	70 Hz to 12 kHz
Power :	DC 12V
Power Consumption :	5.5W Nominal (recording with DC 12V power supply)
Cabinet Size :	263 mm(W)×108 mm(H)×257 mm(D)
Weight :	4.9kg (including Battery Pack VT-BP60E)

VT-TU65E-TUNER

Video Signal :	PAL colour Signal
Antenna (aerial) input	UHF 75 ohms
Power Consumption :	60W
Channel Received :	UHF channels 21—69 (For the United Kingdom) UHF channels 21—69 VHF channels 2—12 (Except for the United Kingdom)
RF Out put :	UHF 75 ohms
Power Supply :	AC 100—110V/115—127V/200—220V/230—250V (For the United Kingdom) AC 200—220V (Except for the United Kingdom) 50 Hz/60 Hz (For the United Kingdom) 50 Hz (Except for the United Kingdom)
Dimensions :	108(H)×230(W)×265(D)mm
Weight :	4.2kg

A-V60E-ADAPTOR

Antenna (aerial) input :	UHF 75 Ω
RF Output :	UHF 75 Ω
Operation Temperature :	0°C to 40°C
Power Supply :	AC 100—120V/200—240V 50/60 Hz
Power Consumption :	48W
Dimensions :	140(W)×108(H)×264(D)mm
Weight :	3kg

|------------------------------------|----------------------------|
| 21. Reel sensor | 28. System control |
| 22. Capstan motor | 29. Operation switch |
| 23. Mechanical state sensor switch | 30. Luminance/Chroma |
| 24. Switching regulator | 31. Cylinder tach head |
| 25. Sound-on-sound | 32. Reel motor driver |
| 26. Camera connector | 33. Cassette holder switch |
| 27. Servo | |

3. Removing the case

1. Top cover (Fig. 14)
 - 1) Remove 2 screws.
 - 2) Lift up the cassette holder.
 - 3) Lift up the rear section a little and pull it backward.

Fig. 14

2. Bottom cover (Fig. 15)
 - 1) Remove 4 screws.

Fig. 15

3. Front cover (Fig. 16)
 - 1) Remove 2 screws.
 - 2) Remove 2 screws.
 - 3) Hold 2 hinges and lift the cover up.

Fig. 16

4. Removing the main mechanical parts

1. Reinforcement plate.
2. Cassette holder Motor, etc.
3. Cylinder/cylinder base
4. Loading motor
5. Capstan motor
6. Reel motor Pulley, etc.
7. FF/REW idler
8. Impedance roller
9. Pressure roller
10. Take-up pulley
11. Play idler
12. Counter pulley
13. Reel disk
14. Slow brake Others
15. Main brake
16. Tension arm/tension band
17. Guide roller base/Inclined guide
18. Sub. chassis
19. Loading gear
20. Frame

1. Reinforcement plate (Fig. 17)

- 1) Remove 4 screws

2. Cassette holder (Fig. 17)

- 1) Lift up the cassette holder.
- 2) Remove the safety tab switch lever.
- 3) Remove 2 screws.

Pay attention to the following when assembling the cassette holder. If it is not done correctly, the cassette holder will not operate properly after assembly. Set the cassette holder up when assembling.

1. The cassette eject arm should be on the right of the eject prevention tab when unloading is complete.
2. The synchronization plate of the cassette holder should enter between the cassette eject arm and the frame.

When the eject arm at the front of the frame is pulled toward you with the servo PC Board kept open when mounting the holder, the synchronization plate easily enters between the eject arm and the frame.

Fig. 17

3. Cylinder/cylinder motor (Fig. 18)

- 1) Remove the cord clumper from the frame, and then remove the connector between the video head and Luminance/Chroma PC Board.
- 2) Pull out the cylinder motor driver PC Board.
- 3) Remove 3 screws to remove the cylinder motor together with the base.
- 4) Remove 3 screws to separate the base and the cylinder motor from each other.

Fig. 18

4. Loading motor (Fig. 19)

- 1) Remove the connector between the loading motor and the loading motor driver PC Board.
- 2) Remove one screw.

Fig. 19

5. Capstan motor (Fig. 20)

- 1) Open the servo PC Board.
- 2) Remove the connector between the capstan motor and the servo PC Board.
- 3) Remove the belt.
- 4) Remove 3 screws.

Fig. 20

6. Reel motor (Fig. 21)

- 1) Remove the connector.
- 2) Remove one screw.
- 3) Move the FF/REW idler so that it does not touch the chassis and the supply brake, and pull out the brake.

Fig. 21

7. FF/REW idler

- 1) Remove the reel motor.
- 2) Loosen the hexagonal screw which holds the motor shaft.

8. Impedance roller

- 1) Remove the reinforcement plate, and pull the roller out from the shaft.
Make sure that the roller shaft enters the U-groove of the impedance roller operation arm during assembly.

9. Pressure roller

- 1) Remove one screw inside the pressure roller.
Assemble the pressure roller with the section provided with the plastic inner wheel top.

10. Take-up pulley

- 1) Remove the washer from the take-up pulley shaft.
- 2) Remove the capstan belt and pull the pulley out of the chassis.

11. Play idler

- 1) Remove the take-up pulley.
- 2) Remove the washer from the play idler ass'y shaft.
- 3) Remove the spring between the play idler ass'y and the sub. chassis.
Check that the take-up brake shaft enters the groove just before the operation slider B, and that the play idler shaft enters the front groove during assembly.

12. Counter pulley

- 1) Remove the washer attached to the reel sensor magnet shaft at the bottom of the chassis.
- 2) Pull out the pulley upward.

13. Reel disk

- 1) Remove the washer from the reel disk shaft.
In the case of the take-up reel disk
- 2) Remove the counter pulley belt and remove the disk from the shaft.
In the case of the supply reel
- 3) Remove the tension band.
- 4) Pull out the supply brake.
- 5) Pull out the reel disk.

14. Slow brake

- 1) Remove the capstan motor.
- 2) Loosen the screw which fixes the slow brake operation slider clamp plate.

15. Main brake

- 1) Remove the brake clamp screw.

16. Tension arm/tension band (Fig. 22)

- 1) Remove the spring between the sub. chassis and the tension arm.

- 2) Remove the tension arm clamp screw.
- 3) Remove the band holder fixing screw.

17. Guide roller base/inclined guide

Guide roller base

- 1) Remove the sub. chassis.
- 2) Remove the leaf spring clamp screw.

Inclined guide

- 1) Remove the screw at the top of the guide roller base.
- 2) Pull out the inclined guide together with the base taking care to prevent it from touching the guide roller.

18. Sub. chassis (Fig. 22)

- 1) Remove the cassette holder.
- 2) Remove the loading motor.
- 3) Remove the cylinder base (to protect the video head)
- 4) Remove the capstan motor.
- 5) Remove the tension arm.
- 6) Remove 2 springs.
- 7) Remove 5 screws.

Pay attention to the following during assembly.

1. The brake operation mechanism shaft should enter the hole in the drive arm A.
2. The X value operation arm drive lever should not touch the slow brake.
3. The pressure roller drive link and the pressure roller arm should be connected.
4. The impedance roller shaft should enter the U-groove of the impedance roller operation arm.
5. The brake operation slider of the chassis and the brake operation slider of the sub. chassis should be connected.
6. Both guide roller bases should be connected to the link.

Fix the sub. chassis after assembly paying attention to the above.

Perform loading and unloading manually while paying attention to the tab of the brake operation pulley to check that all the mechanism is normal, and then set the screws, springs and the tension arm.

19. Loading gear

- 1) Set the mechanism to the unloading complete condition.
- 2) Remove the sub. chassis.
- 3) Remove the drive arm A, switch operation arm and impedance roller operation arm.

During assembly:

1. Install the loading gear so that the triangular projections of both loading gears are symmetrical with respect to the worm gear shaft, and then turn the worm gear in the unloading direction to set the mechanism to the unloading complete condition.
2. Set all the arms to the specified positions.
(Refer to Fig. 10)

Fig. 22

20. Frame (Fig. 23)

- 1) Open the system control PC Board and Servo PC Board.
- 2) Remove the take-up end sensor from the frame.
- 3) Remove the audio PC Board.
- 4) Remove the cord clamber.
- 5) Cut 2 belts.
- 6) Remove 4 connectors of the Servo PC Board.
- 7) Remove the internal battery jack, reel sensor, relay belt, cassette holder switch, reel motor driver PC Board and supply end sensor.
- 8) Remove 3 frame fixing screws to pull the frame down.

Fig. 23

5. Removing the main electric parts and PC Boards

Head

1. Upper cylinder
2. FE head
3. AC head
4. Tach head

PC Board

5. System control PC Board/operation switch PC Board
6. Servo PC Board/luminance/chroma PC Boards
7. Cylinder motor driver PC Board
8. Loading motor driver PC Board
9. Reel motor driver PC Board
10. Mechanical state sensor switch PC Board
11. Reel sensor PC Board
12. Sound-on-sound PC Board
13. Audio PC Board
14. RF converter
15. Switching regulator

1. Upper cylinder (Fig. 26)

- 1) Remove the cylinder motor GND piece.
- 2) Remove 4 leads over the cylinder.
- 3) Remove 2 screws.

2. FE head (Fig. 26)

- 1) Remove the reinforcement plate.
- 2) Remove 2 leads of the head.
- 3) Pull out the head together with the base from the chassis and remove 2 fixing screws at the bottom.

3. AC head (Fig. 26)

- 1) Remove the reinforcement plate.
- 2) Remove the nut.
- 3) Pull out the AC head together with the base paying attention to the spring.

4. Tach head (Fig. 25)

- 1) Open the servo PC Board.
- 2) Remove the tach head bracket fixing screw.
- 3) Remove 2 leads from the head.

5. System control PC Board/operation switch PC Board (Fig. 24)

- 1) Press 2 tabs in the directions of the arrows to open the PC Board.

6. Servo PC Board/Luminance/Chroma PC Board (Fig. 24)

- 1) Open the system control PC Board.
- 2) Press 2 tabs in the directions of the arrows to open the PC Board.

7. Cylinder motor driver PC Board

- 1) Pull out upward.

Fig. 24

8. Loading motor driver PC Board (Fig. 26)

- 1) Remove 1 screw.

9. Reel motor driver

10. Mechanical state sensor switch PC Board

11. Reel sensor PC Board

- 3 PC Boards mentioned above are fixed with 1 screw. (Fig. 25)

12. Sound-on-sound PC Board (Fig. 25)

- 1) Depress 2 tabs and pull out the PC Board in the horizontal direction.

13. Audio PC Board

- Pull out upward.

14. RF converter (Fig. 26)

- 1) Remove 1 screw.

15. Switching regulator (Fig. 25)

- 1) Open the servo PC Board.
- 2) Unsolder 3 positions soldered to the PC Board.

Fig. 25

| 6. Input key | |

2. Removing the case

1. Top cover

- 1) Remove 2 screws.
- 2) Lift up the rear and remove the top cover while pulling it back.

Fig. 28

2. Front cover (Fig. 29)

- 1) Remove the front (Fig. 30)
- 2) Remove 3 screws.

Fig. 29

3. Removing the PC Boards

1. Regulator/timer/input key PC Board (Fig. 30)

- 1) Remove 2 screws from the bottom cover.
- 2) Remove 2 screws.

2. Tuner/IF PC Board (Fig. 31)

- 1) Remove 2 rear cover fixing screws.
- 2) Remove 3 aerial jack plate fixing screws.
- 3) Take out the tuner/IF block from the jack plate side together with the jack plate while pressing the rear cover backward. (Do not push it down)

(With front block removed)

Fig. 30

Fig. 32

- 1. Rectifier/Regulator
- 2. Aux battery charge jack

2. Removing the case

1. Top cover

- 1) Remove 2 screws of the rear cover.

2. Front cover (Fig. 32)

- 1) Remove 2 screws.

Fig. 33

3. Removing the PC Boards

1. Rectifier/Regulator

The above PC Boards are fixed each to the frame using 2 screws.

2. Aux battery charge jack PC Boards

- 1) Remove the Front cover
- 2) Remove the Bottom cover 4 screw
- 3) Remove the 2 screw

Fig. 34

ADJUSTMENT

VT-6500E

1. Electric circuit adjustment

Over-discharge level adjustment

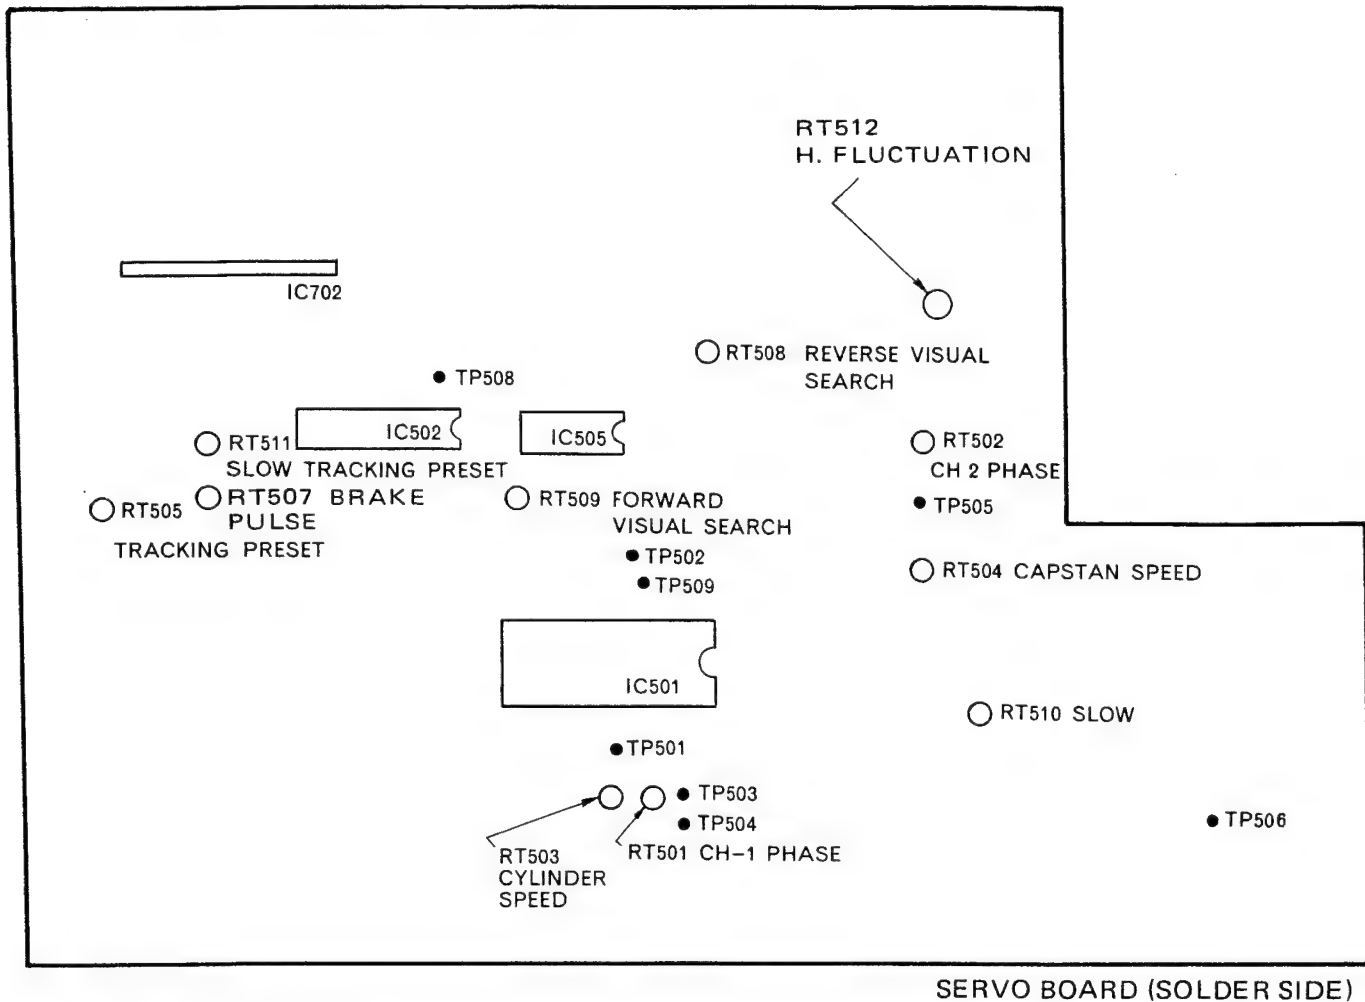

- 1) Turn RT801 (OVER-DISCHARGE LEVEL) fully clockwise.
- 2) Connect the DC power supply to the internal battery jack of the VTR.

Set the output voltage of the DC power supply to $11.2 \pm 0.05V$.

- 3) Turn the operate switch on.
- 4) Adjust RT801 (OVER-DISCHARGE LEVEL) so that the pointer of the battery meter is set to the center between the green and red marks.

Servo circuit adjustment (Servo PC Board)

SERVO BOARD (SOLDER SIDE)

1. Cylinder speed adjustment

- 1) Record a TV broadcast.
- 2) Short-circuit between TP503 and TP504.
- 3) Connect the oscilloscope to TP501.
- 4) Adjust RT503 (CYLINDER SPEED) so that the pulse does not flow in the triangular wave.
- 5) Release short-circuit between TP503 and TP504.

2. Capstan speed adjustment

- 1) Record a TV broadcast.
- 2) Short-circuit between TP503 and TP504.
- 3) Connect the oscilloscope to TP502.
- 4) Adjust RT504 (CAPSTAN SPEED) so that the pulse does not flow in the triangular wave.
- 5) Release short-circuit between TP503 and TP504.

TP502

3. CH-1/CH-2 phase adjustment

- 1) Playback the alignment tape.
- 2) Connect CH-1 of the oscilloscope to the video output terminal and CH-2 to TP206 (SW25Hz) of the Luminance/chroma Board.
- 3) Apply synchronization to CH-2 to set the synchronization slope to "-".
- 4) Adjust RT501 (CH-1 PHASE) so that the front porch of the vertical synchronization signal is 6.5H after the trailing edge of the CH-2 waveform.
- 5) Set the synchronization slope to "+".
- 6) Adjust RT502 (CH-2 PHASE) so that the front porch of the vertical synchronization signal is 6.5H after the leading edge of the CH-2 waveform.

4. Tracking preset adjustment

- 1) Set the tracking knob to the click position.
- 2) Record a TV broadcast.
- 3) Connect the oscilloscope to TP203 on the luminance/chroma Board.
- 4) Playback the recorded section.
Adjust RT505 (TRACKING PRESET) so that the points where the amplitudes of CH1 and CH2 FM envelopes begin to drop are in phase.

5. Brake pulse, slow, slow tracking preset adjustment

- 1) Record a TV broadcast
- 2) Connect the remote control and slow-playback the recorded section.
Set the slow rate higher (approx. 1/5), and turn the slow tracking knob to the 12 o'clock position.
- 3) Connect the oscilloscope to TP506.
- 4) Adjust RT507 (BRAKE PULSE) to set the pulse width to 25msec.

- 5) Connect the oscilloscope to TP505.
- 6) Adjust RT510 (SLOW) to set the center of variation of the pulse width to 84 msec.

- 7) Adjust RT511 (SLOW TRACKING PRESET) to set so that no noise appears in the played back picture.
When noise does appear, adjust so that it is even on the screen.

6. Visual search adjustment

Forward Visual Search

- 1) Connect a oscilloscope to TP508.
- 2) Play back a tape recorded with the colour bar Signal or the TV signal in the forward visual search mode.
- 3) Adjust RT509 (FORWARD VISUAL SEARCH) to obtain the 8 ms pulse period.
- 4) Adjust RT509 to stop the two noise bands on the TV screen.

Reverse Visual Search

- 1) Connect a oscilloscope to TP508.
- 2) Play back a tape recorded with the colour bar Signal or the TV signal in the reverse visual search mode.
- 3) Adjust RT508 (REVERSE VISUAL SEARCH) to obtain the 8 msec pulse period.
- 4) Adjust RT508 to Stop the three noise band on the TV screen.

Note: Reverse Visual Search Adjustment shall be performed after Forward Visual Search Adjustment.

7. Horizontal Fluctuation Adjustment

- 1) Connect the VTR to a TV set.
- 2) Load a recorded tape and place the instrument in the slow mode.
- 3) Set the slow speed control knob to 1/5 speed.
- 4) Adjust RT512 (H. FLUCTUATION) so that the horizontal fluctuation is minimum on the monitor screen.

Luminance/chroma circuit adjustment

1. Record luminance level/record chroma level adjustment

- 1) Connect the color bar generator to the video input terminal.
- 2) Record the color bar.
- 3) Connect the oscilloscope to TP201.
- 4) Turn R235 (REC LUMINANCE LEVEL) to minimize the waveform.
- 5) Adjust R233 (REC CHROMA LEVEL) to set the color level to the value shown in the table while matching to the cylinder mark.

- 6) Adjust R235 (REC LUMINANCE LEVEL) to set the LUMINANCE level to 580 mVp-p.

REC Chroma level

Cylinder mark	Level
Without marks	90 mVp-p
1	100 mVp-p
2	120 mVp-p
3	140 mVp-p
4	150 mVp-p

2. Vertical drive pulse adjustment

- 1) Record a TV broadcast.
- 2) Still-playback the recorded section.
- 3) Adjust R280 (VERT DRIVE PULSE) so that the picture does not fluctuate.
- 4) Set to the SLOW mode and check that the picture does not fluctuate.
- 5) Re-adjust it when any fluctuation occurs.

Note: This adjustment can be performed by removing the Cap on the bottom cover, shown in the next figure, without removing the top cover and bottom cover.

3. APC fo adjustment

- 1) Set the VTR stop mode
- 2) Connect the counter to TP204.
- 3) Adjust C268 so that the frequency measured by the counter is 4.435572 MHz \pm 50 Hz.

4. Play back chroma level adjustment

- 1) Play back the colour bar signal of the alignment tape.
- 2) Connect the oscilloscope to the video output.
- 3) Adjust R279 (PB CHROMA LEVEL) so that the wave form is as shown in the figure.

Audio circuit adjustment (Audio PC Board)

1. Play back level adjustment

- 1) Play back the 1kHz signal of the alignment tape.
- 2) Connect the VTVM to the audio output terminal.
- 3) Adjust RT401 (PB LEVEL) to set the level to $-6\text{dB} \pm 1\text{dB}$.

2. Bias level adjustment

- 1) Load a blank tape and set the VTR to the record mode.
- 2) Connect the VTVM to 2 pins of the AC head PC Board.
- 3) Adjust RT404 (BIAS LEVEL) to set the level to $1.1 \pm 0.05\text{ mVrms}$.

3. Noise cancel adjustment

- 1) Load a blank tape and set the VTR to the PLAY mode.
- 2) Connect the CH-1 probe of the oscilloscope to the audio output terminal.
- 3) Adjust RT402, RT403 (NOISE CANCEL) alternately to minimize noise in the CH-1 waveform.

AUDIO OUT

2. MECHANICAL ADJUSTMENT

Adjusting all parts

Cylinder tach head adjustment

1) (Rough adjustment)

Loosen the tach head bracket fixing screw and move the bracket to set the interval between the head and magnet to 0.5 ± 0.1 mm.

(Fine adjustment)

Observing the wave form of IC501 (HA-11727) 2 pin, perform the Gap adjustment to meet the number of waves to the specified number.

By observing the above positive polarity pulse, adjust to satisfy the following relation; $V_A > 0.75V_P$, $V_B < 0.39V_P$

- 2) Adjust the other magnet in the same way, and tighten screws after both magnets satisfy the values given above.

Fig. 45

Reel sensor adjustment

- 1) Loosen the reel sensor PC Board fixing screws.
- 2) Tighten screws after setting the interval between the sensor and magnet to less than 1.5 mm.

Fig. 46

Mechanical state sensor switch adjustment

- 1) Turn the pulley in the unloading direction until it stops.
- 2) Loosen the fixing screw and move the switch so that the V-shaped groove of the switch and the triangular hole match when viewed from the top.
- 3) Tighten the fixing screw.

Fig. 47

Reel disk height adjustment

- 1) Mount the master plane to the cassette holder and hang the cassette holder.
- 2) Place the Reel disk height jig on the master plane and apply it to the reel disk.
- 3) Adjust the number of spacers (2 types; 0.25 mm thick, 0.5 mm thick) at the bottom of the reel disk to adjust the height of the reel disk so that it can enter between jigs A and B.
(Insert the spacer between the reel disk and the metal washer)

Fig. 48

Guide pole adjustment

- 1) Mount the master plane to the cassette holder.
- 2) Place the reel disk height jig on the master plane and lightly press it against the guide pole.
- 3) Turn the nut at the top of the guide pole and set the interval between the top of the square gauge and the top flange to 0.1 ± 0.1 mm.
- 4) Remove the jig.
- 5) Perform "Running adjustment".

Fig. 49

AC Head adjustment

(Rough adjustment)

Tilt adjustment

- 1) Mount the master plane to the cassette holder and bring the reel disk height jig nearer to the AC head.
- 2) Turn the tilt adjustment screw so that the AC head surface and the reel disk height jig surface are parallel.

Azimuth adjustment

- 1) Turn the azimuth adjustment screw so that the side of the AC head and the side of the reel disk height jig are parallel.
- 2) Remove the jig.

Height adjustment

- 1) Load a tape, and stop in the loaded condition.
- 2) Turn the height adjustment screw so that the core top of the audio erase head is a little above the tape (0.2 mm or less). The core bottom of the CONTROL head should slightly extrude from the tape at this time.

Fig. 50

(Fine adjustment)

Tilt adjustment

- 1) Play back the 6 kHz audio signal of the alignment tape.
- 2) Connect the oscilloscope to the audio output terminal.
- 3) Adjust the tilt adjustment screw to minimize fluctuation of audio level in the audio output.

Azimuth adjustment

- 1) Adjust the azimuth adjustment screw to maximize the audio output of 6 kHz signal.

Height adjustment

- 1) Adjust the height adjustment screw to maximize the audio output.

X value adjustment

- 1) Adjust the right/left motion of the A/C head base plate using the X screw so that the output of the FM envelope waveform is a maximum, with the tracking volume control set at the click position.

Alignment cassette

Oscilloscope

Envelope waveform (TP203/TP206 [Trigger] on the Luminance/Chroma board)

Tension pole position and tension adjustment

Position adjustment

- 1) Cover the light-receiving port of the supply end sensor using paper, etc.
- 2) Set the VTR to the PLAY mode without loading the tape.
- 3) Loosen the tension band fixing screw and put a screwdriver between the band holder and the groove in the chassis.
- 4) Move the band holder using the screwdriver, and set the gap between the tension arm and the fixed guide to 1.0 ± 0.5 mm.
- 5) Set the VTR to the STOP mode and tighten the screw.

Fig. 51

Tension adjustment

- 1) Loosen the spring holder fixing screw.
- 2) Mount the back-tension meter and set the VTR to the PLAY mode.
- 3) Put a screwdriver in the tension adjustment groove on the left side of the set.
- 4) Move the spring holder and set tension to 30 ~ 45g cm.

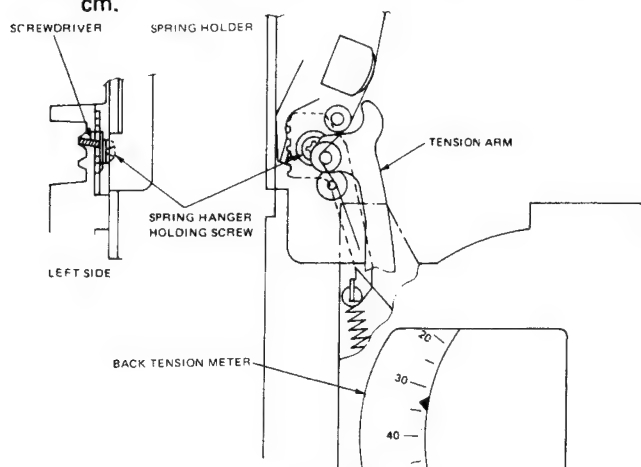

Fig. 52

- 5) Set the VTR to the STOP mode and tighten the screw.
Check the pole position after adjusting tension.
When both values are not satisfied, repeat adjustment.
- 6) Remove the paper used for covering the sensor after adjustment is completed.

Inclined guide adjustment

- 1) Run a blank tape.
- 2) Loosen the inclined guide fixing screw.
- 3) Move the guide to set so that no crease or curl occurs and then lock the fixing screw.
Be sure not to turn the guide roller fixing screw at this time.
- 4) Perform "Running adjustment".

Fig. 53

Checking torques of all parts

The measured values listed below are reference.

	Item	Mode	Measured reel	Measured value
1	Main brake torque	STOP	Both reels	200 gcm or more
2	Slack removal torque	Unloading	Supply reel	100 ~ 200 gcm
3	Rewind	REW	Supply reel	400 gcm or more
4	Take-up	PLAY	Take-up reel	70 ~ 120 gcm
5	FF	F. FWD	Take-up reel	400 gcm or more
6	Supply back-tension	F. FWD	Supply reel	4 ~ 15 gcm
7	Take-up back-tension	REW	Take-up reel	4 ~ 15 gcm
8	Take-up brake torque	(1) ◀◀ Visual search (2) Loading (3) Unloading (4) REC Pause	Take-up reel	80 ~ 140 gcm
9	Search torque	◀◀ Visual search	Supply reel	230 ~ 300 gcm

Tape transport adjustment

It is required to perform the running check adjustment shown below when the upper cylinder or AC head is replaced or removed and refitted or when the tape guide pieces (fixed guide post, impedance roller, guide roller, etc.) are replaced. Do not detach or adjust the parts shown

below. They are adjusted and fixed in the factory using fine jigs, so when they are detached and adjusted, overall running adjustment becomes impossible.

1. Left/right catcher installation screws.

Check item	Judgement	Tool/measuring instrument
Back-tension	30 ~ 45 gr/cm (VTR in horizontal)	Back-tension meter
Guide pole	Tape should slide along the lower flange and not crease or curl.	By eye
Inclined guide and guide roller	Conspicuous creases or curls not present in tape. No adherence of dust.	By eye
Tape	Conspicuous distortion of the tape or change should not be present.	By eye
Impedance roller	Roller should rotate smoothly	By eye
AC head	Tape should keep contact fully with the control head core and audio head core. Approx. 0.2 mm protruded. 	By eye Diagram on the left shows reference values.
Envelope Playback staircase wave from alignment tape Flatness Fluctuation X value	Conspicuous fluctuation should not be present The ratio of the max. section and minimum section of the envelope should be 60% or more (at the worst tracking adjustment) The fluctuation in width of the envelope should be 20% or less. Envelope should be within 80% or more of max. with the tracking knob set to the click position.	Alignment Oscilloscope (TP203, TP206-Trigger)  Envelope wave

Adjust the positions shown below depending on the parts replaced when parts are refitted or replaced.

1. When the upper cylinder is replaced.

	Judgement
Guide roller height	Creases and curls should not occur in the tape
Inclined guide angle	Check fluctuation and flatness of the envelope
Video Head Change	Check, X value, AC head position, switching point, REC LUMINANCE CHROMA level Check following adjustments Page. 18 Section 3 CH1/CH2 phase adjustment (switching point). Page. 19 Section 4 Tracking adjustment. Page. 20 Section 1 Record luminance level/Record chrom level adjustment and playback chroma level adjustment.

2. When the AC head is replaced

	Judgement
AC head height	Check the audio or control track width
AC head azimuth	Maximize audio playback level
AC head tilt	No slack at the top and bottom of the tape
X value position	Conspicuous audio level fluctuation should not be present

3. When the guide roller and inclined guide are replaced.

Same as in item 1.

4. When the guide pole is replaced.

	Judgement	Tool
Guide pole height	No creases or curls should be present. Envelope should not fluctuate	Nutdriver Oscilloscope

VT-TU65E

Electric circuit adjustment (Regulator Board)

12.5V adjustment

1. Connect a VIDEO TUNER (VT-TU65E) to the VTR.
2. Turn the VTR operate switch on.

3. Connect a DC voltmeter to TP901.
4. Adjust R914 (12.5V) so that the reading of the voltmeter is 12.5V ± 0.2V.

Tuner/IF circuit adjustment

PARTS LOCATIONS OF CONTROLS AND TEST POINTS

1. CARRIER FILTER AND VIDEO AMPLITUDE ADJUSTMENT

Positions to be adjusted: L805, R805

Preparation

- 1) Input signal:
Apply the following signal to the aerial input.
a. White test pattern generator with RF output.
- 2) Connect the oscilloscope to IC801-24 (set to DC range).
- 3) Turn the operate switch on.
- 4) Signal level:
-41 dBm \pm 10 dBm (converted to antenna input)
0 dBm = 1 mW

Adjustment procedure

- 1) Turn the core of L805 clockwise so that it touches the P.C. Board surface.
- 2) Next, turn the core gradually counterclockwise to check that the normal detection waveform appears and the white section shown in Fig. 17 is larger than a minimum. Turn the core clockwise from this position and stop just before the white section begins to increase. Adjustment precision: b/a (shown in Figure should be 0/ +0.5, -0 dB.)
- 3) Adjust R805 so that the value of the video signal is 1.25 \pm 0.05 Vp-p

2. AUDIO TRAP ADJUSTMENT

Position to be adjusted: L804

Preparation

- 1) Input signal
Apply the following signal to TP of the ET-548 [ET541] IF sweeper.
- 2) Connect the oscilloscope to IC801-24.
- 3) AGC voltage.
Connect pin 22 of IC801 to ground and apply 8.6/ +1 -0V. to pin 12 of IC801.
- 4) Connect a 50Ω resistor in parallel with L805 (between pins 18 and 19 of IC801).

Adjustment procedure

Adjust L804 so that point of the waveform at IC801-24 is a minimum.

3. AFS ADJUSTMENT (AUTOMATIC FINE SETTING)

Position to be adjusted: L806

Preparation

- 1) Input signal
Apply the following signal to TP of ET-548. [ET-541]
- 2) Connect the voltmeter to terminal 16 of IC801.
- 3) AGC voltage
Connect pin 22 of IC801 to ground and apply 8.6V to pin 12.
- 4) Turn the operate switch on.
- 5) Adjust the output level of the signal generator so that the waveform at IC801-24 is 0.7 Vp-p at AM 40% modulation.

Adjustment procedure

Adjust L806 so that the voltmeter shows $7.0 \pm 1.0V$ with the fp signal.

4. S IF (SOUND IF) ADJUSTMENT

Position to be adjusted: L882

Preparation

- 1) Apply an AM reference signal to IC881-2.
Setting the output of the AM standard signal generator.
 - a. Carrier wave frequency:
 - 6.0 MHz ± 5 kHz (For the UK)
 - 5.5 ± 5 kHz (Except for the UK)
 - b. Modulation frequency: 400 Hz
 - c. Modulation: AM 30%
 - d. Output level: -75 dBm ~ -55 dBm
- 2) Connect pin 6 of IC881 to ground (It is not necessary to do this when pin 6 is grounded).
- 3) Connect the oscilloscope to terminal 4 of CN801.
- 4) Turn the operate switch on.

Adjustment procedure

Adjust L882 so that the signal amplitude is a minimum.

5. P IF (PICTURE IF) ADJUSTMENT

Position to be adjusted: IFT of ET-548 [ET-541]

Preparation

Sweeper method (Simple method):

- 1) The following voltage is applied to the tuner.
- 2) Voltage applied to the P.C. Board.
- 3) Connect a 50Ω resistor in parallel with L804 (between pin 18 and 19 of IC801).
- 4) Connect the oscilloscope to TP801.

Adjustment procedure

Adjust the coil IFT so that the peak of the waveform is around the band's center and the marker level is within the following values.

[For ET-548]

$$\begin{aligned} f_p &= 39.5 \text{ MHz} \\ f_c' &= 35.07 \text{ MHz} \\ f_s &= 33.5 \text{ MHz} \end{aligned}$$

[For ET-541]

$$\begin{aligned} f_p &= 38.9 \text{ MHz} \\ f_c' &= 34.47 \text{ MHz} \\ f_s &= 33.4 \text{ MHz} \end{aligned}$$

6. AGC (AUTOMATIC GAIN CONTROL) ADJUSTMENT

Position to be adjusted: R810

Preparation

- 1) Apply the RF signal to the aerial terminal
Signal level: -47 dBm. (aerial input)
- 2) Connect the voltmeter to the AGC terminal of the tuner.
Use a voltmeter with an internal impedance of more than $100\text{ k}\Omega$.

Adjustment procedure

Measure the voltage at the beginning when there is no signal. (Assume this voltage to be V_1).

Next, input the signal and adjust R810 to obtain $V_1 + 0.1 / + 0.1, - 0.05\text{V}$ (with AFS ON).

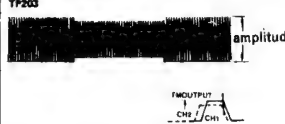

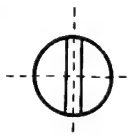

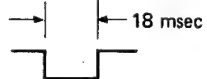

Since this adjustment is affected by the circuit's temperature drift perform a heat-run for more than 2 minutes in the signal reception mode.

3. Be sure to make your orders of resistors and capacitors with value, voltage, tolerance and sort.
4. When replacing capacitors marked with * use specified ones stated on parts list since required temperature characteristics.

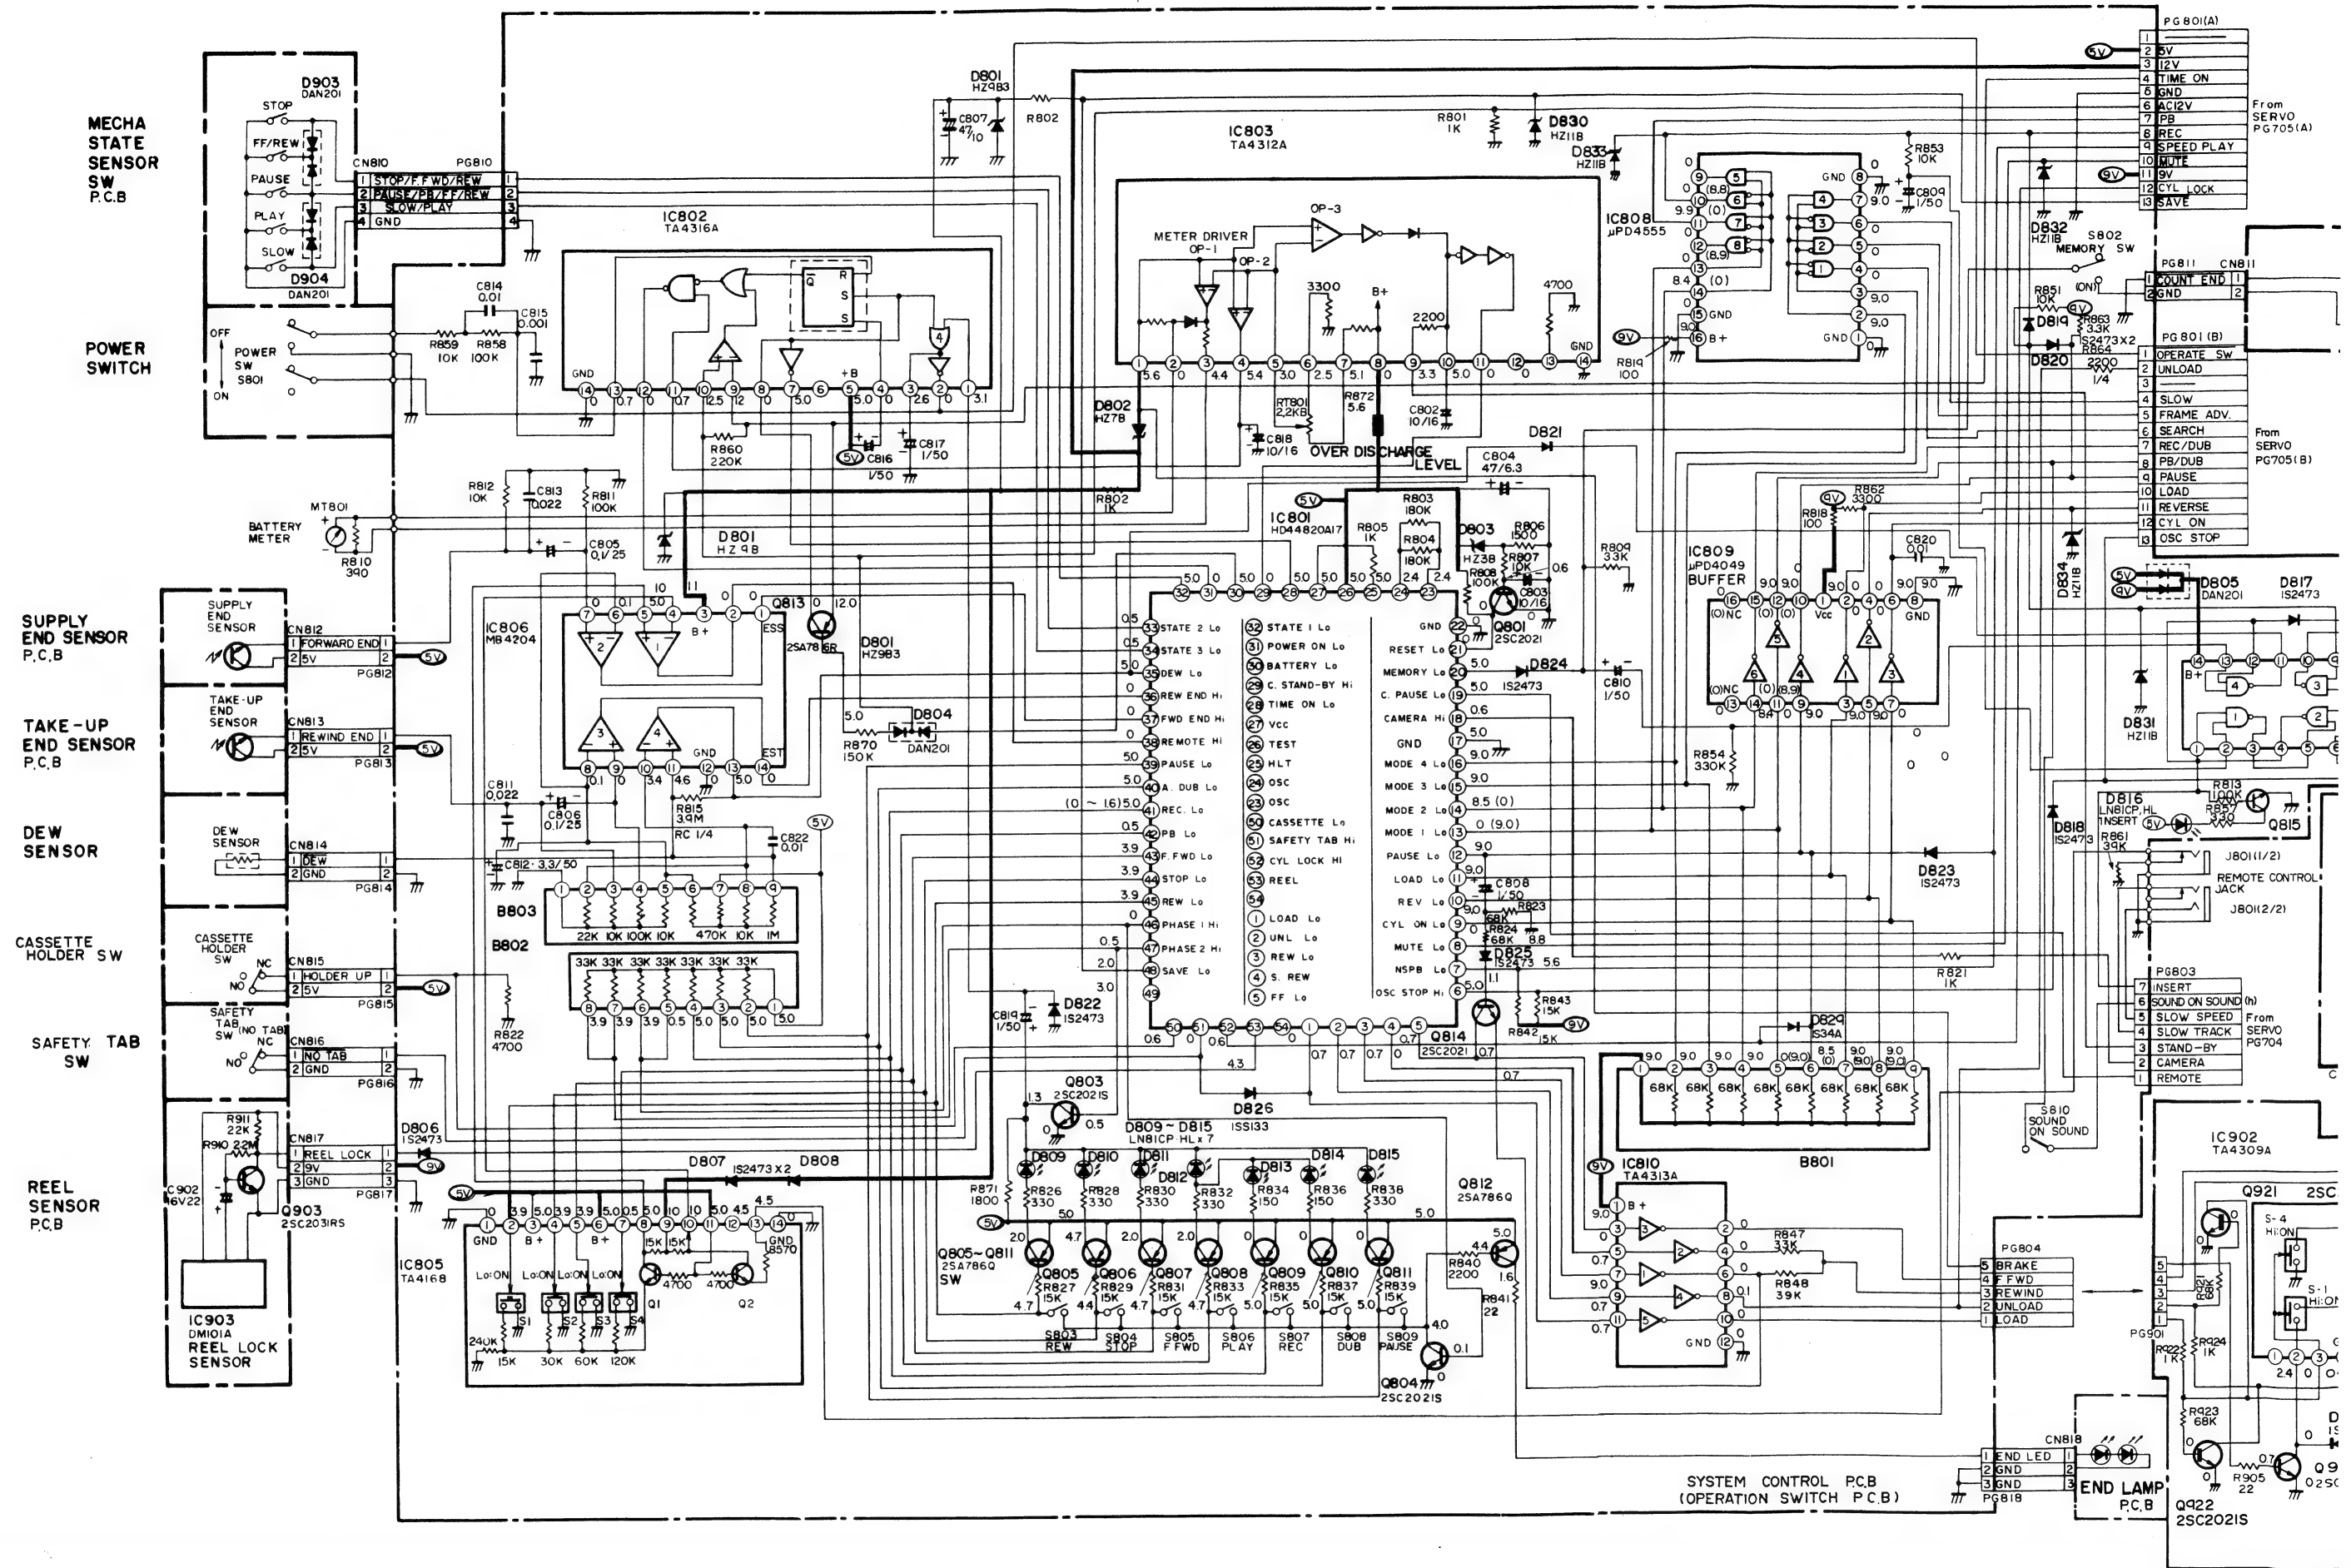

Cautions on use of MOS IC

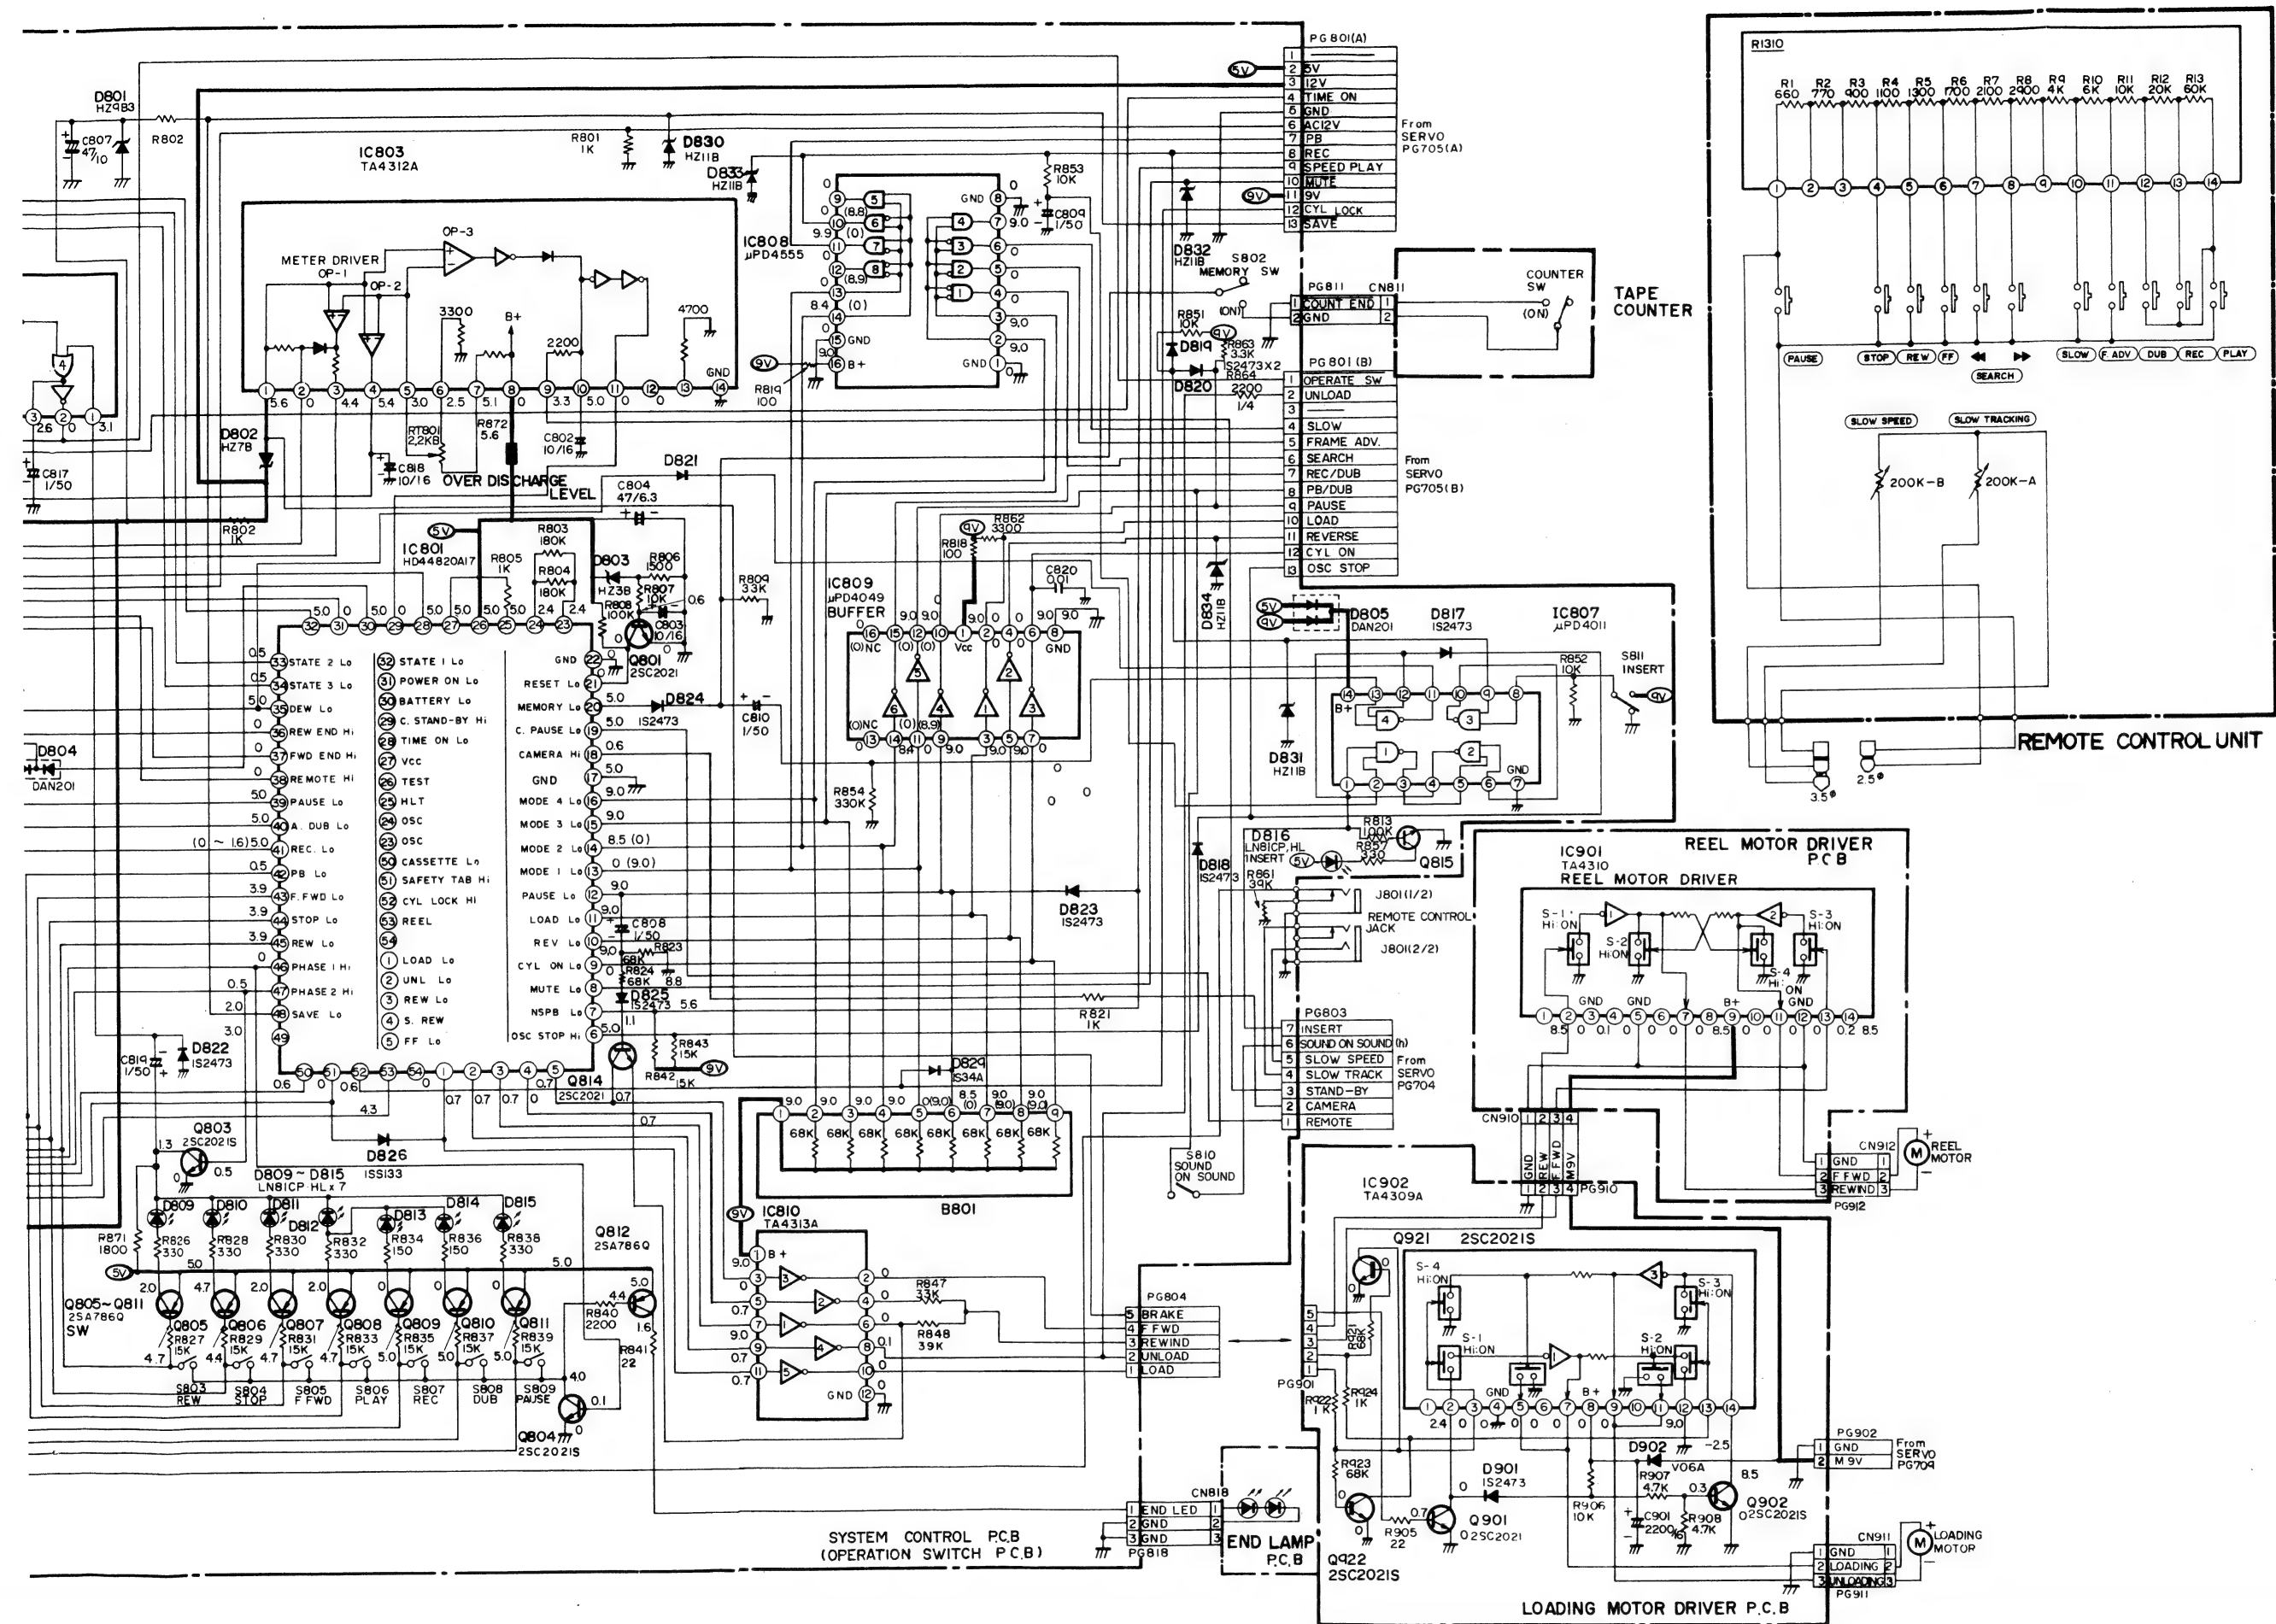

1. The MOS IC is inserted in black foam for shipment. This foam is a conductor which short-circuits between the leads to prevent damage. Do not remove ICs from this foam during their storage. Avoid removing ICs from this foam, placing them on plastic which is likely to be charged with static electricity or inserting them into styrol foam.
2. High voltages may be applied during soldering caused by leakages from the soldering iron, so be sure to ground the tip of the soldering iron or use a low voltage soldering iron.
3. The human body, clothes made of synthetic fibres or nylon gloves may be charged with several thousands volts of static electricity because of friction, so a workers should be grounded.
4. Be sure to ground measuring instruments such as oscilloscopes, VTVMs, etc. used for repairs.

OVERALL BLOCK DIAGRAM (VT-6500E)

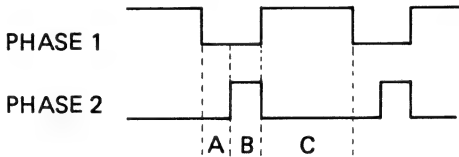

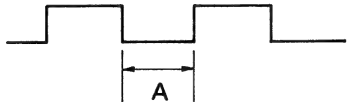

Microprocessor (μ P) input/output table

This table shows the levels and functions of the microprocessor input and output which are used in the system control circuit.

How to read the table

PIN NO.	I/O	Active level	Abbreviation	Function
Pin No.	Input/output pin I: Input O: Output I/O: In common with input/output	Level in execution of specified operation Hi, Lo	Abbreviation of operation excuted during Pin input/output	Operation related to pin input/output

PIN NO.	I/O	Active level	Abbreviation	Function
1	I/O	Lo	LOAD (Loading)	Loading motor control
2			UNL (Unloading)	* -1
3			S. REW (Slow rewind)	Reel motor control
4			REW (Rewind)	* -2
5			FF (Fast forward)	
6		Hi	OSC STOP	Stops bias oscillation of audio circuit in modes other than REC, Audio dubbing modes.
7		Lo	NSPB (Non-standard play)	Performs playback at speeds other than standard speed
8			MUTE (mute)	Performs muting temporarily during the period (e.g. during loading/unloading, etc.) until the unit enters the specified mode.
9			CYL ON (Cylinder ON)	Starts cylinder by the specified operation (e.g. play, record)
10			REV (Reverse) * -3	Rotates capstan motor in reverse
11			LOAD (Loading)	Performs monitor-cut during loading period
12			PAUSE (Pause)	Operation mode
13			MODE 1	output * -4
14			MODE 2	
15			MODE 3	
16			MODE 4	
17		Lo	EP (6HR)	Programs 6 Hr data in μ P
18		Hi	CAMERA (Camera)	Feeds camera connection data into μ P
19		Lo	C. PAUSE (Camera pause)	Feeds camera pause data into μ P
20		Lo	MEMORY (Memory)	Feeds memory end data into μ P
21		Lo	RESET (Reset)	Performs resetting during power set up
28		Lo	TIME ON (Time ON)	Feeds Timer recording period into μ P
29		Hi	C. STANDBY (Camera stand by)	Feeds Camera standby mode into μ P
30	I/O	Lo	BATTERY (Battery)	Inputs type of power supply (Lo: DC)
31		Lo	POWER ON (Power ON)	Inputs power switch state

d)

PIN NO.	I/O	Active level	Abbreviation	Function	
32		Lo	STATE 1	Inputs guide roller position * -5	STOP/FF/REW
33		Lo	STATE 2		FF/REW/PAUSE/PB
34		Lo	STATE 3		PB/SLOW
35		Lo	DEW	Inputs dew data	
36		Hi	REW END (Rewind end)	Inputs rewind completion	
37		Hi	FWD END (Forward end)	Inputs forward completion	
38		Hi	REMOTE (Remote)	Inputs data remote control operation button	
39	I/O	Lo	PAUSE (Pause)	Inputs operation button data, retains output	Performs PAUSE
40			A. DUB (Audio dubbing)		Performs audio dubbing
41			REC (Record)		Performs recording
42			PB (Play)	Inputs operation button in, retaining output and outputting D/A code	Performs play
43			F. FWD (Fast forward)		Performs fast-forward
44			STOP (Stop)		Performs stop
45			REW (Rewind)		Performs rewind
46	O	Hi	PHASE 1 (Phase 1)	Inputs operation button data	
47	O	Hi	PHASE 2 (Phase 2)	Lighting mode indicator and retaining power state	
<div><div><div>PHASE 1</div><div>PHASE 2</div><div></div><div>Section A: Remote control button input Section B: Operation button input Section C: Driving mode indicator</div></div></div>					
48	O	Lo	SAVE (Save)	Executes power-save mode	
50	I	Lo	CASSETTE (Cassette)	Inputs cassette holder closed	
51	I	Hi	SAFETY TAB (Safety tab)	Inputs that Safety tab is present	
52	I	Hi	CYL LOCK (Cylinder lock)	Inputs cylinder abnormality	
53	I	—	REEL (Reel)	Inputs abnormal tape transport condition	
<div><div></div><div>More than 3 sec at standard playback Abnormal if more than 1.5 sec at FF/REW, search.</div></div>					

The table below shows the relationship between the input and output concerning the operation buttons during the μ P operation. Factors concerning the operations marked * -1 to -5 in the previous table are listed in this table.

Table 3

		IC901		LOAD	UNL	SREW	REW	FF	REV	PAUSE	MODE				STATE

PIN	I/O	ACTIVE LEVEL	ABBREVIATION	FUNCTION
41 42 1 2 3 4 5 6	O	Hi	G ₈ G ₇ G ₆ G ₅ G ₄ G ₃ G ₂ G ₁	G ₅ — G ₈ : Channel selection matrix pulse forming and display grid driving pulse. G ₁ — G ₄ : Keyboard selection matrix pulse forming and display grid driving pulse. (Fig. A)
7			CHANNEL UP	This is a rectangular pulse with a width of 100 msec. When the 16CH pulse (30) is detected, this pin generates the same number of pulses as the tuned channels to perform channel selection.
8			TIME ON	Set to Hi, and Hi during recording. 1. Precedence of executing programs is as shown below. Those with earlier set time > Those with smaller program No. 2. Program to be executed when the power is restored. Program which has started before power failure.
9			REMOTE CH-UP	Applied with the channel selection by means of the remote control. The channel-up output is obtained from pin 7 by means of this operation.
10			P. FAIL	Power failure is detected at Lo, and inhibits input/output of μP during the back-up period. This causes no indication on the display during the back-up period.
11			CLOCK	Receives the clock pulse which is a standard of the μP.
12			—	—
13			Hz/Hr	Selects μP frequency and the time indication system by applying to the matrix pulse. Frequency selection: Connected to pin 23 → 60 Hz Non-connected → 50 Hz Indication selection: Connected to pin 24 → 24 Hrs Connected to pin 25 → 12 Hrs
14	O	—	Vdisp	This is the — B power supply of the G1 ~ G8 output buffer (inside μP); by varying this potential, the output of G1 ~ G8 is limited to change brightness of the display.
15	O	Lo	RESET	Resets μP when the power is supplied.
18 19	O	—	OSC 1 OSC 2	External oscillator connection pins.
22 23 24 25	I	Hi	MAT 1 MAT 2 MAT 3 MAT 4	Generate the matrix pulse by combining G1 ~ G8 using keys. Store the programs in memories using this pulse. (Table A)
26			TIMER	Receives signal that it is the timer mode.
27			POWER	Receives signal that power is supplied to the VTR.

PIN	I/O	ACTIVE LEVEL	ABBREVIATION	FUNCTION
28	I	Hi	RECORD	Receives signal that it is in the record mode.
29			PAUSE	Receives signal that it is in the pause mode. * The conditions shown in the table B become possible by combining 4 types of the input shown above.
30	O	Hi	16 CH	Instructs to select the channel of 16 CHs with the timer standby and power OFF.
32 33 34 35 36 37 38 39 40	O	Hi	a, 3 b, 2 c, ON, AM, PF d, OFF, PM, CH e f g 1 ~ 8 SUN ~	3: 3rd week 2: 2nd week Display segments driving output. * Synchronizes with the grid driving pulses G ₁ ~ G ₈ and lights. Programme number Day of the week

μP: HD38800A29
 (8PRO/3 WEEKS)

PIN	I/O	ACTIVE LEVEL	ABBREVIATION	FUNCTION
41 42 1 2 3 4 5 6	O	Hi	G ₈ G ₇ G ₆ G ₅ G ₄ G ₃ G ₂ G ₁	G ₅ — G ₈ : Channel selection matrix pulse forming and display grid driving pulse. G ₁ — G ₄ : Keyboard selction matrix pulse forming and display grid driving pulse. (Fig. A)
7	O	Lo → Hi	CHANNEL UP	This is a rectangular pulse with a width of 100 msec. When the 16CH pulse (30) is detected, this pin generates the same number of pulses as the tuned channels to perform channel selection.
8	O	Hi	TIME ON	Set to Hi, and Hi during recording. 1. Precedence of executing programs is as shown below. Those with earlier set time > Those with smaller program No. 2. Program to be executed when the power is restored. Program which has started before power failure.
9	O	Hi	REMOTE CH-UP	Applied with the channel selection by means of the remote control. The channel-up output is obtained from pin 7 by means of this operation.
10	O	Lo	P. FAIL	Power failure is detected at Lo, and inhibits input/output of μP during the back-up period. This causes no indication on the display during the back-up period.
11	O	—	CLOCK	Receives the clock pulse which is a standard of the μP.
12	—	—	—	—
13	O	Hi	Hz/Hr	Selects μP frequency and the time indication system by applying to the matrix pulse. Frequency selection: Connected to pin 23 → 60 Hz Non-connected → 50 Hz Indication selection: Connected to pin 24 → 24 Hrs Connected to pin 25 → 12 Hrs
14	O	—	Vdisp	This is the — B power supply of the G1 ~ G8 output buffer (inside μP); by varying this potential, the output of G1 ~ G8 is limited to change brightness of the display.
15	O	Lo	RESET	Resets μP when the power is supplied.
18 19	O	—	OSC 1 OSC 2	External oscillator connection pins.
22 23 24 25	I	Hi	MAT 1 MAT 2 MAT 3 MAT 4	Generate the matrix pulse by combining G1 ~ G8 using keys. Store the programs in memories using this pulse. (Table A)
26	I	Hi	TIMER	Receives signal that it is the timer mode.
27	I	Hi	POWER	Receives signal that power is supplied to the VTR.

PIN	I/O	ACTIVE LEVEL	ABBREVIATION	FUNCTION
28	I	Hi	RECORD	Receives signal that it is in the record mode.
29	I	Hi	PAUSE	Receives signal that it is in the pause mode. * The conditions shown in the table B become possible by combining 4 types of the input shown above.
30	O	Hi	16 CH	Instructs to select the channel of 16 CHs with the timer standby and power OFF.
32 33 34 35 36 37 38 39 40	O	Hi	a. 3 b. 2 c. ON, AM, PF d. OFF, PM, CH e f g 1 ~ 8 SUN ~	3: 3rd week 2: 2nd week Display segments driving output. * Synchronizes with the grid driving pulses G ₁ ~ G ₈ and lights. Programme number Day of the week

SCREW CLASSIFICATION

Example: BT3 x 6

Abbreviation	Name	Shape
No symbol	Brazier head	
P	Pan head	
B	Binding head	
O	Oval countersunk head	
F	Flat countersunk head	

Abbreviation	Name	Shape
No symbol	Machine (clamps without tapping)	
t	Tapping (clamps with tapping) Type 1	
T	Tapping (clamps with tapping) Type 2	
f	Forming tight (for metal)	
Note: Since the forming tight screw tightens while self-tapping, machine screws can be replaced by tapping screws.		

Washers and Nuts		
Abbreviation	Name	Shape
W	Washer	
SW	Spring washer	
LW	Locking washer	
E	E-ring	
N	Nut	
Note: Internal dia. is indicated for nuts and washers

Einstell liste 17

Die Abgleiche sind in diesem Informationsmaterial beschrieben.

Die Schaltpläne und die Diagramme der Leiterplatten sind der Wartungs-
anleitung für die Modelle VT-6500E, VT-TU65E, A-V60E (No.1587)

Zu entnehmen.

EINSTELLUNGEN

Wartungsvorrichtungen und Werkzeuge

① Bandspannungs-Anzeigedisplay

② Einstellband

③ Cassettenschacht-Positioniervorrichtung

④ Adapter für Drehmomentmesser

⑤ Drehmomentmesser

⑥ Wickelteller-Höheneinstellehre

⑦ Bandspannungs-Meßspule

⑧ Sechseckige Schraubenschlüssel

⑨ Spannungsmesser

VT-6500E

1. Einstellungen der elektrischen Schaltkreise

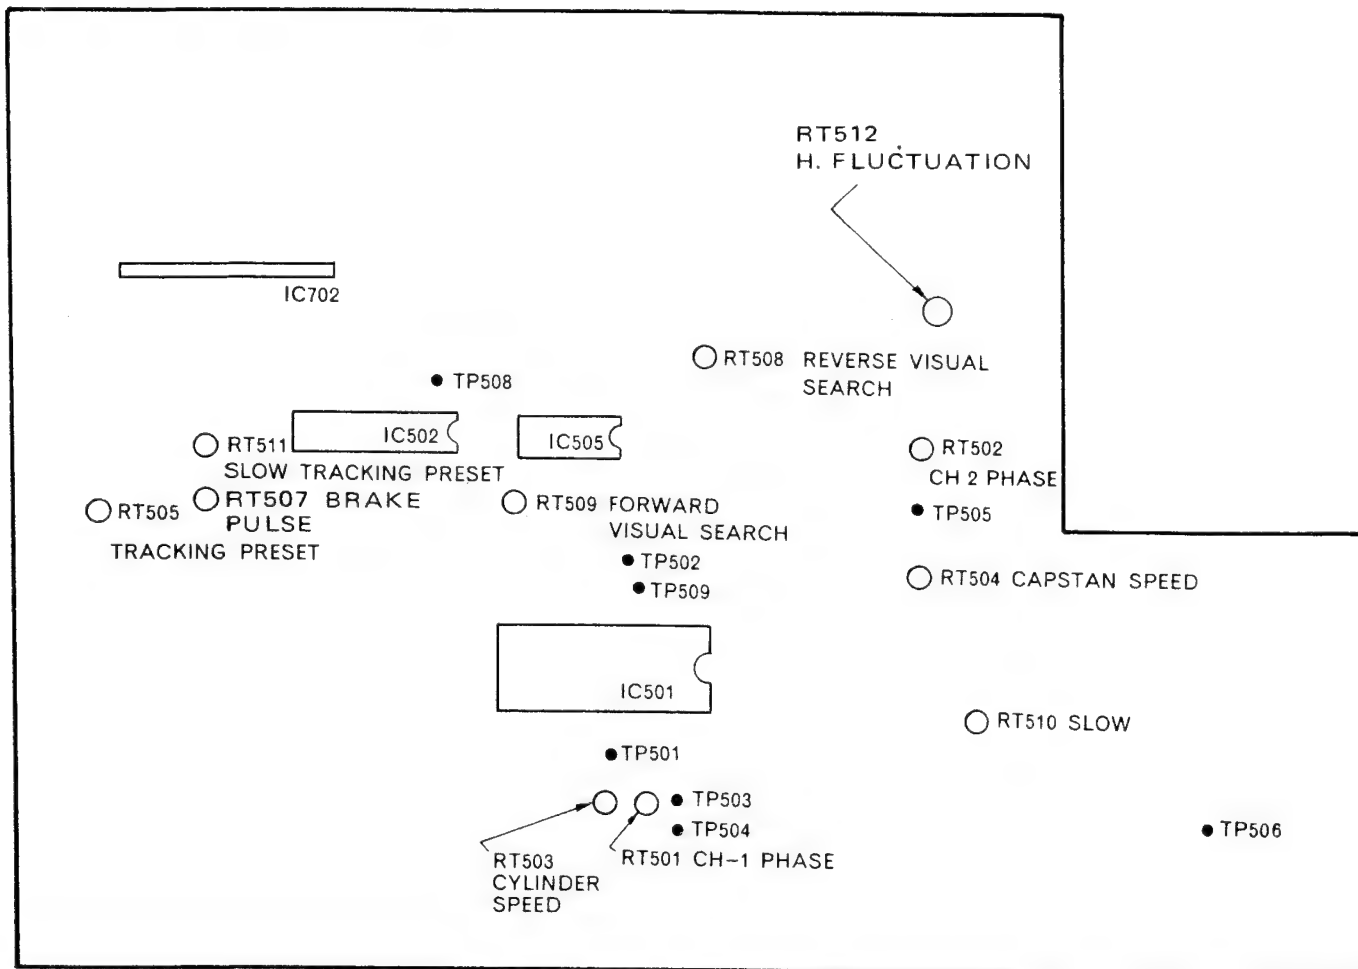

System-Regelungs-Leiterplatte
(Bestückungsseite)

Einstellung des Entladepegels

- 1) Den Regelwiderstand RT801 (OVER-DISCHARGE LEVEL) bis zum Anschlag im Uhrzeigersinn drehen.
- 2) Die Gleichstromversorgung an die interne Batteriebuchse des Video-Recorders anschließen.
Die Ausgangsspannung der Gleichstromversorgung auf $11,2 \pm 0,05V$ einstellen.
- 3) Den Betriebsschalter einschalten.
- 4) RT801 (OVER-DISCHARGE LEVEL) so einstellen, daß der Zeiger des Batterie-Prüfgerätes in die Mitte zwischen den grünen und roten Markierungen ausschlägt.

Einstellung der Servo-Schaltkreise

Servo-Leiterplatte (Leiterbahnseite)

1. Einstellung der Drehzahl der Bildkopftrommel

- 1) Ein Fernsehprogramm aufzeichnen.
- 2) Die Prüfpunkte TP503 und TP504 kurzschließen.
- 3) Ein Oszilloskop an TP501 anschließen.
- 4) RT503 (CYLINDER SPEED) so einstellen, daß der Impuls in der Dreieckswelle stillsteht.
- 5) Den Kurzschluß zwischen TP503 und TP504 wieder lösen.

2. Einstellung der Drehzahl der Antriebswelle

- 1) Ein Fernsehprogramm aufzeichnen.
- 2) Die Prüfpunkte TP503 und TP504 kurzschließen.
- 3) Ein Oszilloskop an TP502 anschließen.
- 4) RT504 (CAPSTAN SPEED) so einstellen, daß der Impuls in der Dreieckswelle stillsteht.
- 5) Den Kurzschluß zwischen TP503 und TP504 wieder lösen.

TP502

3. Phaseneinstellung für CH-1/CH-2

- 1) Das Abgleichband abspielen.
- 2) CH-1 des Oszilloskops an die Video-Ausgangsklemme und CH-2 an TP206 (SW25Hz) der Luminanz/Chroma-Leiterplatte anschließen.
- 3) Ein Synchronsignal an CH-2 anlegen, um die Synchronflanke auf "—" zu stellen.
- 4) RT504 (CH-1 PHASE) so einstellen, daß die vordere Schwarzscher des Bildsynchronsignals 6.5H nach der Abfallflanke der CH-2 Wellenform angeordnet ist.
- 5) Die Synchronflanke auf "+" stellen.
- 6) RT504 (CH-2 PHASE) so einstellen, daß die vordere Schwarzscher des Bildsynchronsignals 6.5H nach der Anstiegsflanke der CH-2 Wellenform angeordnet ist.

4. Spurlagen-Voreinstellung

- 1) Den Spurlagenregler in die Raststellung bringen.
- 2) Ein Fernsehprogramm aufzeichnen.
- 3) Ein Oszilloskop an TP203 der Luminanz/Chroma-Leiterplatte anschließen.
- 4) Die Aufnahme wiedergeben.
RT505 (TRACKING PRESET) so einstellen, daß die Phase der Punkte übereinstimmt, an welchen die Amplituden der CH-1 und CH-2 FM-Hüllkurven abfallen.

5. Einstellung des Bremsimpulses, der Zeitlupe und der Zeitlupen-Spurlage

- 1) Ein Fernsehprogramm aufzeichnen.
- 2) Die Fernbedienung anschließen und die Aufnahme in der Zeitlupenfunktion wiedergeben.
Die Zeitlupenfunktion auf etwa 1/5 einstellen und den Spurlagenregler in die Vertikalstellung bringen.
- 3) Ein Oszilloskop an TP506 anschließen.
- 4) RT507 (BRAKE PULSE) so einstellen, daß die Impulsbreite 25 msek. beträgt.

- 5) Das Oszilloskop an TP505 anschließen.
- 6) RT510 (SLOW) so einstellen, daß die Änderung der Impulsbreite 84 msek. beträgt.

- 7) RT511 (SLOW TRACKING PRESET) so einstellen, daß keine Rauschbalken im Bild der Wiedergabe erscheinen. Falls Rauschbalken auftreten, so einstellen, daß diese gleichmäßig über das Bild verteilt sind.

6. Bildsuchlauf-Einstellungen

Bildsuchlauf in Vorlaufrichtung

- 1) Ein Oszilloskop an TP508 anschließen.
- 2) Ein Band abspielen, auf dem ein Farbbalkensignal aufgezeichnet wurde (Bildsuchlauffunktion in Vorlaufrichtung).
- 3) RT509 (FORWARD VISUAL SEARCH) so einstellen, daß die Impulsdauer 8 msek. beträgt.
- 4) RT509 so einstellen, daß die beiden Rauschbänder am Bildschirm stillstehen.

Bildsuchlauf in Rücklaufrichtung

- 1) Ein Oszilloskop an TP508 anschließen.
- 2) Ein Band abspielen, auf dem ein Farbbalkensignal aufgezeichnet wurde (Bildsuchlauffunktion in Rücklaufrichtung).
- 3) RT508 (REVERSE VISUAL SEARCH) so einstellen, daß die Impulsdauer 8 msek. beträgt.
- 4) RT508 so einstellen, daß die drei Rauschbänder am Bildschirm stillstehen.

Hinweis: Die Einstellung für den Bildsuchlauf in Rücklaufrichtung hat nach der Einstellung für den Bildsuchlauf in Vorlaufrichtung zu erfolgen.

7. Horizontaler Bildfang

- 1) Den Video-Recorder an einen Fernsehempfänger anschließen.
- 2) Ein bespieltes Band einsetzen und den Recorder auf Zeitlupe schalten.
- 3) Den Zeitlupen-Regelknopf auf 1/5 stellen.
- 4) RT512 (H. FLUCTUATION) so einstellen, daß es zu minimalen horizontalen Bildschwankungen am Bildschirm kommt.

Einstellung des Luminanz/Chroma-Schaltkreises

Luminanz/Chroma-Leiterplatte
(Leiterbahnseite)

1. Einstellung des Aufnahme-Luminanz/Chroma-Pegels

- 1) Einen Farbbalkengenerator an die Video-Eingangsklemme anschließen.
- 2) Ein Farbbalkensignal aufzeichnen.
- 3) Ein Oszilloskop an TP201 anschließen.
- 4) R235 (REC LUMINANC LEVEL) auf minimale Wellenform einstellen.
- 5) R233 (REC CHROMA LEVEL) so einstellen, daß der in der Tabelle gezeigte Farbpegelwert erhalten wird, wenn die Markierungen der Bildkopftrommel übereinstimmen.

Aufnahme-Chroma-Pegel

Bildkopftrommel-Markierung	Pegel
Ohne Markierungen	90 mV _{S-S}
1	100 mV _{S-S}
2	120 mV _{S-S}
3	140 mV _{S-S}
4	150 mV _{S-S}

- 6) R235 (REC LUMINANC LEVEL) auf einen Luminanz-Pegel Von 580 mV_{S-S} Einstellen.

2. Einstellung des Bildaustastimpulses

- 1) Ein Fernsehprogramm aufzeichnen.
- 2) Das bespielte Band in der Stehbildfunktion abspielen.
- 3) R280 (VERT DRIVE PULSE) so einstellen, daß das Bild nicht schwankt.
- 4) Auf die Zeitlupenfunktion schalten und darauf achten, daß das Bild nicht schwankt.
- 5) Nachjustieren, falls Bildschwankungen auftreten.

Hinweis: Diese Einstellung kann durchgeführt werden, indem die Kappe von der Unterseite des Gerätes (siehe nachfolgende Abbildung) abgenommen wird, ohne daß die obere Abdeckung bzw. die Bodenplatte entfernt werden muß.

3. Einstellung der automatischen Phasenregelung (APC)

- 1) Den Video-Recorder auf die Stoppfunktion schalten.
- 2) Einen Frequenzzähler an TP204 anschließen.
- 3) C268 so einstellen, daß der Frequenzzähler eine Frequenz von 4,435572 MHz ± 50 Hz anzeigt.

4. Einstellung des Wiedergabe-Chromapegels

- 1) Das Farbbalkensignal des Abgleichbandes wiedergeben.
- 2) Ein Oszilloskop an den Video-Ausgang anschließen.
- 3) R279 (PB CHROMA LEVEL) so einstellen, daß die in der Abbildung gezeigte Wellenform erhalten wird.

Einstellung des Audio-Schaltkreises (Audio-Leiterplatte)

Audio-Leiterplatte
(Bestückungsseite)

1. Einstellung des Wiedergabe-Tonpegels

- 1) Das 1 kHz Signal des Abgleichbandes abspielen.
- 2) Ein Röhrenvoltmeter an die Audio-Ausgangsklemme anschließen.
- 3) RT401 (PB LEVEL) auf einen Pegel von $-6 \text{ dB} \pm \text{dB}$ einstellen.

2. Einstellung des Vormagnetisierungspegels

- 1) Eine Leer-Cassette einsetzen und den Video-Recorder auf Aufnahme schalten.
- 2) Ein Röhrenvoltmeter an 2 Stifte der Steuerspurkopf-Leiterplatte anschließen.
- 3) RT404 (BIAS LEVEL) auf einen Pegel von $1,1 \pm 0,05 \text{ mV}$ (effektiv) einstellen.

3. Einstellung des Rauschbegrenzers

- 1) Eine Leer-Cassette einsetzen und den Video-Recorder auf Wiedergabe schalten.
- 2) Die CH-1 Sonde des Oszilloskops an den Audio-Ausgang anschließen.
- 3) RT402 und RT403 (NOISE CANCEL) abwechselnd einstellen, um minimales Rauschen in der CH-1 Wellenform zu erhalten.

Audio-Ausgang (AUDIO OUT)

2. Mechanische Einstellungen

Einstellung der einzelnen Baugruppen

Einstellung der Bildkopftrommel

1) (Grobeinstellung)

Die Befestigungsschraube des Tachosignalgebers lösen und die Konsole des Tachosignalgebers so einstellen, daß zwischen Kopf und Magnet ein Abstand von $0,5 \pm 0,1$ mm erhalten wird.

(Feineinstellung)

Die Wellenform an Stift 2 des IC501 (HA-11727) beobachten und den Abstand so einstellen, daß die vorgeschriebene Anzahl an Signalwellen erhalten wird.

Den obigen positiven Impuls beobachten und die Einstellung so vornehmen, daß die folgende Bedingung erfüllt wird: $V_A \ 0,75 \text{ Vs-s}$ $V_B \ 0,39 \text{ Vs-s}$

- 2) Den anderen Magnet auf die gleiche Weise einstellen und die Schrauben festziehen, nachdem beide Magnete die obige Bedingung erfüllen.

Einstellung des Wickeltellersensors

- 1) Die Befestigungsschrauben der Leiterplatte des Wickeltellersensors lösen.
- 2) Die Schrauben wieder festziehen, nachdem der Abstand zwischen dem Sensor und dem Magnet auf weniger als 1,5 mm eingestellt wurde.

Einstellung des mechanischen Sensorschalters

- 1) Die Riemenscheibe bis zum Anschlag in die Ausfädelrichtung drehen.
- 2) Die Befestigungsschraube lösen und den Schalter verschieben, bis die V-förmige Nut des Schalters und die dreieckige Bohrung (gesehen von oben) übereinstimmen.
- 3) Die Befestigungsschraube wieder festziehen.

Einstellung der Wickeltellerhöhe

- 1) Die Hauptmeßlehre in den Cassettenhalter einsetzen und den Cassettenhalter hochheben.
- 2) Die Wickeltellerhöhen-Meßlehre auf die Hauptmeßlehre setzen und an den Wickelteller bringen.
- 3) Mittels Einstellscheiben (Stärke 0,25 mm oder 0,5 mm) an der Unterseite des Wickeltellers die Wickeltellerhöhe so einstellen, daß der Wickelteller zwischen den Punkten A und B der Meßlehre liegt. (Die Einstellscheiben zwischen dem Wickelteller und der Metallscheibe einsetzen.)

Einstellung der führungsstifte

- 1) Die Hauptmeßlehre in den Cassettenhalter einsetzen.
- 2) Die Wickeltellerhöhen-Meßlehre an der Hauptmeßlehre anbringen und leicht gegen den führungsstift drücken drehen und den Abstand zwischen Oberkante.
- 3) Die Mutter an der Oberseite der Führungsstiftes der Meßlehre und oberen Flansch auf $0,1 \pm 0,1$ mm einstellen.
- 4) Die Meßlehre entfernen.
- 5) Die Bandlaufwerk-Einstellung durchführen.

Einstellung des Steuerspurkopfes (Grobeinstellung)

Einstellung des Neigungswinkels

- 1) Die Hauptmeßlehre in den Cassettenhalter einsetzen und die Wickeltellerhöhen-Meßlehre in die Nähe des Steuerspurkopfes bringen.
- 2) Die Neigungswinkel-Einstellschraube drehen, bis die Oberfläche des Steuerspurkopfes parallel zur Oberfläche der Meßlehre liegt.

Azimut-Einstellung

- 1) Die Azimut-Einstellschraube drehen, bis die Seite des Steuerspurkopfes parallel zur Seite der Wickeltellerhöhen-Einstellehre liegt.
- 2) Die Meßlehre entfernen.

Höheneinstellung

- 1) Ein Magnetband einfädeln und im eingefädelten Zustand auf die Stoppfunktion schalten.
- 2) Die Höhereinstellschraube drehen, bis die Oberkante des Kerns des Tonlöschkopfes etwas über dem Magnetband (0,2 mm oder weniger) liegt. Die Unterseite des Kerns des Steuerspurkopfes sollte dabei etwas über das Band überstehen.

(Feineinstellung)

Einstellung des Neigungswinkels

- 1) Ein Magnetband mit einem 6 kHz Tonsignal (Abgleichband) abspielen.
- 2) Ein Oszilloskop an den Audio-Ausgang anschließen.
- 3) Die Neigungswinkel-Einstellschraube so einstellen, daß minimale Tonpegelschwankungen am Audio-Ausgang sichergestellt sind.

Azimut-Einstellung

- 1) Die Azimut-Einstellschraube auf maximalen Pegel des 6 kHz Signals am Audio-Ausgang einstellen.

Höheneinstellung

- 1) Die Höhereinstellschraube auf maximalen Audio-Ausgang einstellen.

X-Wert-Einstellung

- 1) Die Bewegung der Ton/Steuerspurkopf-grundplatte nach rechts/links mit Hilfe der X-Wert-Schraube so einstellen, daß der Ausgang der FM-Hüllkurven-Wellenform ein Maximum annimmt, wobei der Spurlagenregler in seiner Raststellung sein muß.

Abgleichcassette

Oszilloskop

Hüllkurven-Wellenform (TP203/TP206 (Trigger) der Luminanz/Chroma-Leiterplatte)

Einstellung der Position und der Spannung des Spannstiftes

Einstellung der Position

- 1) Das Lichtfenster des Vorratsteller-Bandendensors mit Papier usw. abdecken.
- 2) Den Video-Recorder auf Wiedergabe schalten, ohne eine Cassette einzusetzen.
- 3) Die Spannband-Befestigungsschraube lösen und einen Schraubendreher zwischen dem Bandhalter und der Nut im Chassis einführen.
- 4) Den Bandhalter mittels Schraubendreher bewegen und den Abstand zwischen dem Spannarm und der festen Führung auf $1,0 \pm 0,5 \text{ mm}$ einstellen.
- 5) Den Video-Recorder auf die Stoppfunktion schalten und die Schraube festziehen.

Spannungseinstellung

- 1) Die Befestigungsschraube des Federhalters lösen.
- 2) Den Spannungsmesser anbringen und den Video-Recorder auf Wiedergabe schalten.
- 3) Einen Schraubendreher in die Einstellnut an der linken Seite des Gerätes einschieben.
- 4) Den Federhalter bewegen und die Spannung auf 30 – 45 g.cm einstellen.

- 5) Den Video-Recorder auf die Stoppfunktion schalten und die Schraube festziehen. Nach der Einstellung der Spannung sollte nochmals die Position des Führungsstiftes kontrolliert werden. Falls beide Werte nicht stimmen, die Einstellung wiederholen.
- 6) Das Papier, das am Lichtfenster des Sensors angebracht wurde, nach Beendigung der Einstellung entfernen.

Einstellung der schrägen Föhrung

- 1) Ein leeres Band abspielen.
- 2) Die Befestigungsschraube der schrägen Föhrung lösen.
- 3) Die Föhrung so einstellen, daß das Band keine Falten aufweist, und die Befestigungsschraube festziehen. Dabei darf jedoch die Föhrungsrollen-Befestigungsschraube nicht gedreht werden.
- 4) Die Bandlaufwerk-Einstellung vornehmen.

Prüfen der Drehmomente der verschiedenen Teile

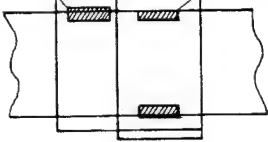

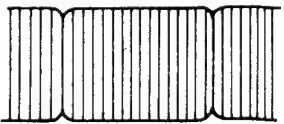

Die nachfolgenden Werte sind Bezugswerte.

	Benennung	Betriebsart	Gemessen an	Meßwert
1	Hauptbremsmoment	Stopp	Beide Wickelteller	200 gcm oder mehr
2	Spannmoment	Ausfädeln	Vorratsteller	100–200 gcm
3	Rücklauf	Rücklauf	Vorratsteller	400 gcm oder mehr
4	Aufspulen	Wiedergabe	Wickelteller	70–120 gcm
5	Schnellvorlauf	Schnellvorlauf	Wickelteller	400 gcm oder mehr
6	Vorratstellerspannung	Schnellvorlauf	Vorratsteller	4–15 gcm
7	Wickeltellerspannung	Rücklauf	Wickelteller	4–15 gcm
8	Wickelteller-Bremsmoment	(1) «Bildsuchläuf (2) Einfädeln (3) Ausfädeln (4) Aufnahme-Pause	Wickelteller	80–140 gcm
9	Suchlaufmoment	« Bildsuchlauf	Vorratsspule	230–300 gcm

Einstellung des Bandtransportes

Wenn die obere Bildkopftrommel oder der Ton/Steuer-spurkopf erneuert bzw. aus- und wiedereingebaut oder wenn die Bandführungsteile (fester Führungsstift, Andruck-rolle, Führungsrolle usw.) erneuert wurden, muß der Bandtransport eingestellt werden. Die nachfolgend gezeig-

ten Teile dürfen nicht ausgebaut bzw. verstellt werden, da diese Teile mit Hilfe von Meßlehren genau eingestellt wurden; wenn diese Teile ausgebaut bzw. verstellt werden, kann der Bandtransport nicht richtig eingestellt werden.

Prüfpunkt	Beurteilungskriterium	Werkzeug/Meßinstrument
Spannung	30–45 gcm (Video-Recorder Waagrecht)	Spannungsmesser
Führungsstift	Das Band sollte am unteren Flansch entlanggleiten und keine Falten bilden.	Sichtprüfung
Schräge Führung und Führungsrolle	Band darf keine Falten bilden. Kein Staub darf anhaften.	Sichtprüfung
Band	Das Band darf keine Falten aufweisen	Sichtprüfung
Andruckrolle	Die Rolle sollte glatt drehen	Sichtprüfung
Ton/Steuer-spurkopf	Das Band sollte guten Kontakt mit den Kernen des Steuer-spur- und des Tonkopfes haben. Überstand ca. 0,2 mm  Tonkopfkern	Sichtprüfung. Linkes Diagramm zeigt Bezugswert.
Hüllkurve Wiedergabe- Treppenwelle vom Abgleich- band	Bildschwankungen sollten nicht auftreten Die Mindestbreite der Hüllkurve sollte wenigstens 60% der Maximalbreite der Hüllkurve (bei schlechtester Spurlageneinstellung) betragen. Die Breitenschwankungen der Hüllkurve sollten weniger als 20% betragen. Bei in der Raststellung befindlichem Spurlagenregler sollte die Hüllkurve mehr als 80% der Maximalbreite aufweisen.	Oszilloskop (TP203, TP206, Trigger)  Hüllkurve

Abhängig von den erneuerten Teilen sind die folgenden Einstellungen durchzuführen, nachdem die Teile eingebaut wurden.

1. Wenn die obere Bildkopftrommel erneuert wurde.

	Beurteilungskriterium
Führungsrollenhöhe	Das Band sollte keine Falten aufweisen
Winkel der schrägen Führung	Schwankungen und Ebenheit der Hüllkurve prüfen
Bildkopfwechsel	Die folgenden Einstellungen prüfen: Seite 4 Abschnitt 3 CH-1/CH-2 Phaseneinstellung (Schaltpunkt) Seite 5 Abschnitt 4 Spurlageneinstellung Seite 6 Abschnitt 1 Aufnahme-Luminanz/Chroma-Pegeleinstellung und Wiedergabe-Chroma-Pegeleinstellung

2. Wenn der Ton/Steuerspulkopf erneuert wurde:

	Beurteilungskriterium
Höhe des Ton/ Steuerspulkopfes	Tonspur- oder Steuerspurbreite prüfen
Azimet des Ton/ Steuerspulkopfes	Ton-Wiedergabepegel auf ein Maximum einstellen.
Neigung des Ton/ Steuerspulkopfes	Band muß oben und unten gespannt sein.
X-Wert-Position	Tonschwankungen dürfen nicht auftreten

3. Wenn die Führungsrolle und die schräge Führung erneuert wurden:

Gleich wie in Punkt 1.

4. Wenn der Führungstift erneuert wurde:

	Beurteilungskriterium	Werkzeug
Führungstifthöhe	Band darf keine Falten aufweisen Hüllkurve darf keine Schwankungen aufweisen	Mutterschlüssel Oszilloskop

VT-TU65E

Einstellung der elektrischen Schaltkreise

Regler-Leiterplatte (Leiterbahnseite)

12,5 V Einstellung

1. Den Video-Tuner (VT-TU65E) an den Video-Recorder anschließen.
2. Den Betriebsschalter des Video-Recorders einschalten.
3. Einen Gleichspannungsmesser an TP901 anschließen.
4. R914 (12,5 V) so einstellen, daß am Voltmeter eine Spannung von 12,5 V ± 0,2 V angezeigt wird.

Einstellung des Tuner/ZF-Schaltkreises (Tuner · IF)

Anordnung der Einstellteile und Prüfpunkte

AF-Leiterplatte (Bestückungsseite)

ET-548 (Modell für Großbritannien)

ET-548

ET-541 (Ausgenommen Großbritannien)

ET-541

1. Einstellung des trägerfrequenzfilters und der Videosignalamplitude (CARRIER FILTER)

Einstellposition: L805, R805

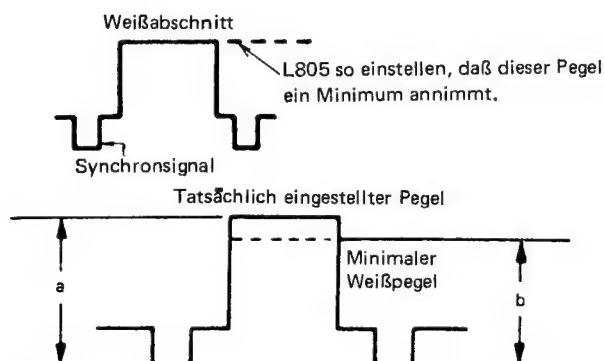

Vorbereitung

- 1) Eingangssignal
Die folgenden Signale am Antennen-Eingang einspeisen.
a. Generator für weißes Testbild mit HF-Ausgang.
- 2) Das Oszilloskop an IC801-24 anschließen (auf Gleichstrombereich stellen).
- 3) Den Betriebsschalter einschalten.
- 4) Signalpegel
 $-41 \text{ dBm} \pm 10 \text{ dBm}$ (umgewandelt in Antennen-Eingang)
 $0 \text{ dBm} = 1 \text{ mW}$

Einstellvorgang

- 1) Den Kern von L805 im Uhrzeigersinn drehen, bis er die Leiterplatte berührt.
- 2) Danach den Kern langsam gegen den Uhrzeigersinn drehen, um zu überprüfen, ob die normale Detektor-Wellenform und der Weißabschnitt (gezeigt in Abb. 17) größer als das Minimum sind. Aus dieser Position ist der Kern im Uhrzeigersinn zu drehen; den Kern freigeben, bevor der Weißabschnitt größer wird. Einstellgenauigkeit: b/a (gezeigt in der Abbildung) sollte $0 + 0,5 - 0 \text{ dB}$ sein.
- 3) R805 (VIDEO LEVEL) so abgleichen, daß der Video Signalpegel $1,25 \pm 0,05 \text{ Vs-s}$ beträgt.

2. Einstellung des Audio-Traps (AUDIO TRAP)

Einstellposition: L804

Vorbereitung

- 1) Eingangssignal
Das folgende Signal an den prüfpunkt von ET-541 (ET-541) anlegen. Wobbelgenerator
- 2) Das Oszilloskop an IC801-24 anschließen.
- 3) AGC-Spannung
Den Stift 22 des IC801 mit Masse verbinden und an Stift 1 des IC801 eine Spannung von $8,6 + 1, - 0 \text{ V}$ einspeisen.
- 4) Einen 50 Ohm Widerstand parallel zu L805 schalten (zwischen den Stiften 18 und 19 des IC801).

Einstellvorgang

L804 so einstellen, daß der Punkt der Wellenform an IC801-24 ein Minimum annimmt.

3. Automatische Feineinstellung (AFS)

Einstellposition: L806

Vorbereitung

- 1) Eingangssignal
Das folgende Signal am Prüfpunkt von ET-541 (ET-548) einspeisen.
- 2) Ein Voltmeter an Stift 16 des IC801 anschließen.
- 3) AGC-Spannung
Den Stift 22 des IC801 mit Masse verbinden und eine Spannung von 8,6 V an Stift 12 anlegen.
- 4) Den Betriebsschalter einschalten.
- 5) Den Ausgangspegel des Signalgenerators so einstellen, daß die Wellenform an IC801-24 eine Amplituden-Modulation (AM) von 40% aufweist und 0,7 Vs-s beträgt.

Einstellvorgang

L806 so einstellen, daß mit dem f_p -Signal am Voltmeter eine Spannung von $7,0 \pm 1,0$ V angezeigt wird.

4. Ton-ZF-Einstellung (S IF)

Einstellposition: L882

Vorbereitung

- 1) Ein AM-Bezugssignal an IC881-2 einspeisen.
Den Ausgang des AM-Standard-Signalgenerators einstellen.
a. Trägerwellenfrequenz:
 $6,0 \text{ MHz} \pm 5 \text{ kHz}$ (für Großbritannien)
 $5,5 \pm 5 \text{ kHz}$ (ausgenommen für Großbritannien)
b. Modulationsfrequenz: 400 Hz
c. Modulation: AM 30%
d. Ausgangspegel: -75 dBm bis -55 dBm
- 2) Den Stift 6 des IC881 mit Masse verbinden (dies ist nicht erforderlich, falls Stift 6 bereits mit Masse verbunden ist).
- 3) Das Oszilloskop an Stift 4 des CN801 anschließen.
- 4) Den Betriebsschalter einschalten.

Einstellvorgang

L882 so einstellen, daß die Signalamplitude ein Minimum annimmt.

5. Bild-ZF-Einstellung (P. IF)

Einstellposition: IFT des ET-541 (ET-548)

Vorbereitung

Verfahren mit Wobbelgenerator (vereinfachtes Verfahren)

- 1) Die folgende Spannung an den Tuner anlegen.
- 2) Spannung an die Leiterplatte anlegen.
- 3) Einen 50 Ohm Widerstand parallel zu L804 schalten (zwischen Stift 18 und 19 des IC801).
- 4) Ein Oszilloskop an TP801 anschließen.

Einstellvorgang

Die Spule IFT so einstellen, daß der Spitzenwert der Wellenform in der Mitte des Bandes angeordnet ist und der Markenpegel innerhalb der nachfolgenden Werte liegt.

$$\begin{aligned} f_p &= 39.5 \text{ MHz} \\ f_c' &= 35.07 \text{ MHz} \\ f_s &= 33.5 \text{ MHz} \end{aligned}$$

(Für ET-541)

$$\begin{aligned} f_p &= 38.9 \text{ MHz} \\ f_c' &= 34.47 \text{ MHz} \\ f_s &= 33.4 \text{ MHz} \end{aligned}$$

6. Einstellung der automatischen Verstärkungsregelung (AGC)

Einstellposition: R810

Vorbereitung

- 1) Ein HF-Signal an der Antennenklemme einspeisen.
Signalpegel: -47 dBm (Antennen-Eingang)
- 2) Ein Voltmeter an die AGC-Klemme des Tuners anschließen. Ein Voltmeter mit einem Innenwiderstand von mehr als 100 k Ohm verwenden.

Einstellvorgang

Die Spannung ohne Signal messe (diese Spannung mit V1 bezeichnen). Danach das Signal einspeisen und R810 einstellen, bis V1 gleich $+0,1/+0,1, -0,05 \text{ V}$ beträgt (bei eingeschaltetem AFS-Schalter).

Da diese Einstellung durch Temperaturschwankungen des Schaltkreises beeinflußt wird, das Gerät aufwärmen, indem für mehr als zwei Minuten ein Signal im Empfangsbetrieb eingespeist wird.

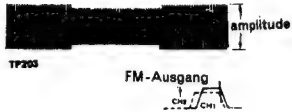

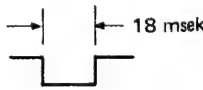

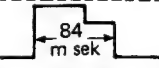

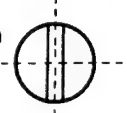

VT-6500E/VT-TU65E/A-V60E Einstell-Liste

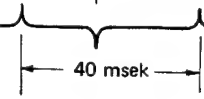

VT6500E

(Systemregelungs-Leiterplatte)

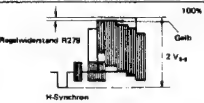

Einstellpunkt	Prüfpunkt	Meßinstrument oder Vorgang	Einstell-position	Meßwert
Überentladepegel	Batterie-Anzeige	Die Gleichstromversorgung an die interne Batteriebuchse anschließen und auf Gs 11,2 V einstellen.	RT801	Den Zeiger in die Mitte zwischen den grünen und roten Markierungen einstellen.

(Servo-Leiterplatte)

I. TROUBLE-SHOOTING PROCEDURE	1
II. TROUBLE-SHOOTING	2
1. POWER SYSTEM	2
1-1. Power cannot be applied	2
1-2. Power cannot be turned OFF	3
1-3. Power is switched off when a shock is applied	3
1-4. Power SW turned OFF immediately	3
1-5. Charging not possible	3
1-6. Enters the charge mode with the battery power set to ON	3
2. MECHANICAL SYSTEM	4
2-1. Damaged or broken tape	4
2-2. Counter does not turn	5
2-3. Abnormal sound during FF operation	5
2-4. Cassette housing does not rise	5
2-5. Handle stopper does not work	5
2-6. Taking up tape is not possible	5
3. SYSTEM CONTROL SYSTEM	6
3-1. Loading is not done	6
3-2. Unloading is not done	7
3-3. Unloading is done several seconds after PLAY	8
3-4. Tape does not run	9
3-5. FF/REW is not done	10
3-6. INSERT is not possible	11
3-7. Search faulty (Cue, Rev.)	12
3-8. SLOW/FRAME ADVANCE faulty	13
3-9. Loading stops intermittently	14
3-10. Reversing occurs with INSERT	14
3-11. Supply-reel turns with power ON	14
3-12. Cylinder turns with power ON	14
3-13. Power turned OFF with FF/REW-STOP	14
3-14. Cylinder does not turn	14
3-15. Remote control does not operate	15
3-16. Does not enter STOP and SLOW modes from remote control	15
3-17. Power switched off during operation	15
3-18. DUB lamp lights with power ON	15
3-19. STOP lamp flashes	15
3-20. DUB lamp lights due to shock	15
3-21. Timer-recording is not released	15
3-22. Does not enter PAUSE mode when camera is connected	16

3-23. Battery meter drifted	16
3-24. Picture disappear in PAUSE mode	16
3-25. Does not enter PAUSE mode	16
3-26. End detection not possible in REC mode	16
3-27. SEARCH operation is not done	16
3-28. Battery meter cannot be adjusted	16
3-29. Tape does not travel when the unit is used on color TV (CA-554) (tape travels when it is used away from color TV)	17
3-30. Does not stop with counter set to "999"	17
3-31. Search, frame advance faulty	17
4. EE SYSTEM	18
4-1. EE picture does not appear	18
4-2. Camera EE does not appear	19
4-3. EE level too low	19
4-4. EE picture does not appear when shock is applied	19
4-5. Lamp (B) flashes when camera is connected	19
4-6. Right-down beat noise appears on the screen	19
5. PLAY SYSTEM	20
5-1. PLAY picture does not appear	20
5-2. PLAY color does not appear	21
5-3. PLAY picture quality faulty	21
5-4. Horizontal black noise occurs when the tapes which were recorded on this unit or another unit are played back	22
5-5. Black and white inverted	22
5-6. Color beat	22
5-7. Play sync level too low	22
5-8. Drum servo faulty	22
5-9. Noise cannot be reduced in fine slow	22
5-10. Capstan servo faulty	23
5-11. SW25 does not come out	23
5-12. Play picture noise	23
5-13. PLAY picture S/N faulty	23
5-14. Play picture fluctuates	23
5-15. Play picture abnormal	24
5-16. EE picture during play	24
5-17. Still picture fluctuates	24
5-18. Abnormal sound during play	24
5-19. Electrostatic noise during play	24
5-20. Horizontal stipes appear on the monitor when battery is used	24

6. RECORDING SYSTEM	25
6-1. Video-recording is not done	25
6-2. REC color does not appear	26
6-3. REC FM level too low	27
6-4. Noise occurs during recording	27
6-5. Color level too low	27
6-6. Color noise occurs	27
6-7. TV recording is not possible	27
7. AUDIO SYSTEM	28
7-1. Play sound is not heard	28
7-2. EE sound is not heard	29
7-3. Recording (sound) is not done	30
7-4. Abnormal sound during play	30
7-5. SOUND-ON-SOUND recording not possible	30
7-6. Audio WOW	30
7-7. Sound is not changed over in the PLAY mode	31
7-8. Record sound cannot be erased by audio dubbing	31
III. μP TROUBLE-SHOOTING	32

I. TROUBLE-SHOOTING PROCEDURE

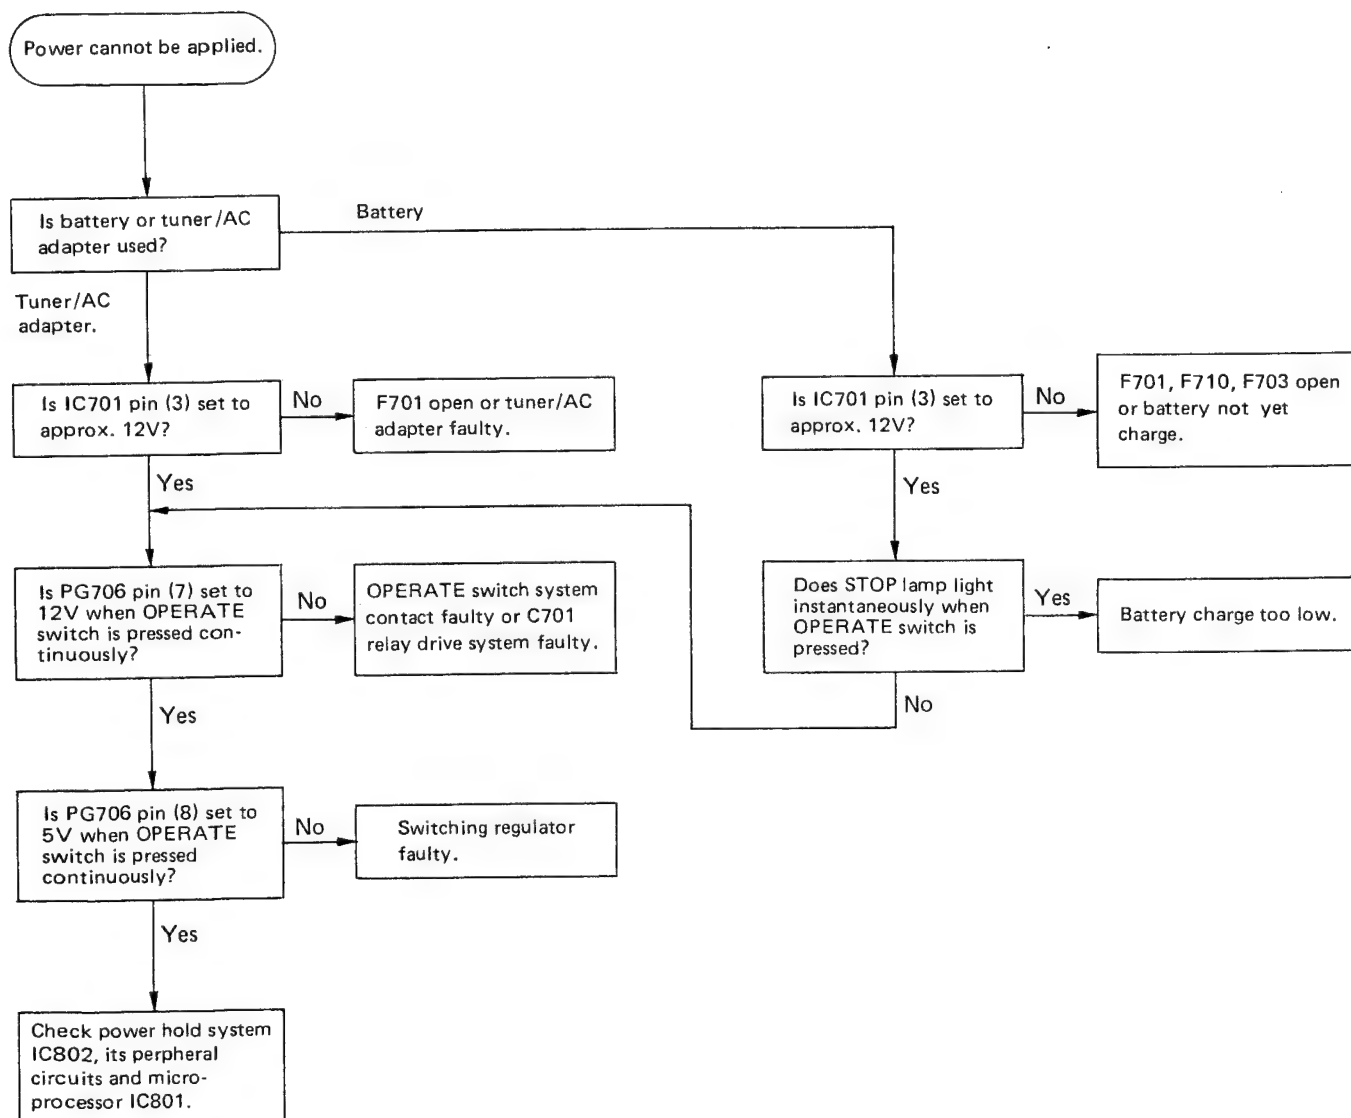

Perform various operations including playing back a normally recorded tape and recording/playback of the TV signal, etc. to check for troubles in the monitor picture and mechanical operation.

II. TROUBLE-SHOOTING

1. POWER SYSTEM

1-1. Power cannot be applied

	Cause	Remedy	Remarks
1	SYC PC Board B803 pin (7), (8) short-circuited	Replace the resistor block or resolder	
2	Servo PC Board PG711 contact faulty	Reinsert	
3	Servo PC Board IC701 (TA4308A) faulty	Replace IC	
4	3A fuse blown (F701)	Replace fuse	
5	4A fuse blown (F703)	Replace fuse	
6	PG712 contact faulty	Reinsert	
7	PG710 contact faulty	Reinsert	
8	RL701 contact faulty	Replace RL701	

1-2. Power cannot be turned OFF

	Cause	Remedy	Remarks
1	Solder on OFF side of SYC PC Board S801 touching	Resolder	

1-3 Power is switched off when a shock is applied

	Cause	Remedy	Remarks
1	SYC PC Board IC801 pin (11) contact faulty	Resolder	
2	SYC PC Board PG801 pin (13) contact faulty	Resolder	

1-4 Power SW turned OFF immediately

	Cause	Remedy	Remarks
1	SYC PC Board IC801 (HD44820A17) faulty	Replace IC	
2	SYC PC Board PG801 (13) contact faulty	Resolder	

1-5 Charging not possible

	Cause	Remedy	Remarks
1	Tuner-adaptor contact faulty	Replace or resolder	

1-6 Enters the charge mode with the battery power set to ON.

	Cause	Remedy	Remarks
1	D705 faulty	Replace	

2. MECHANICAL SYSTEM

2-1. Damaged or broken tape

2-2 Counter does not turn

	Cause	Remedy	Remarks
1	Belt slipped off	Reinstall belt	

2-3 Abnormal sound during FF operation

	Cause	Remedy	Remarks
1	Fixing counter faulty	Re-fix counter	

2-4 Cassette housing does not rise

	Cause	Remedy	Remarks
1	EJECT lever spring slipped off	Reinstall spring	

2-5 Handle stopper does not work

	Cause	Remedy	Remarks
1	Front panel stopper mold recess slipped off	Replace front panel	

2-6 Taking up tape is not possible

	Cause	Remedy	Remarks
1	Loading motor pulley caught	Re-wire	

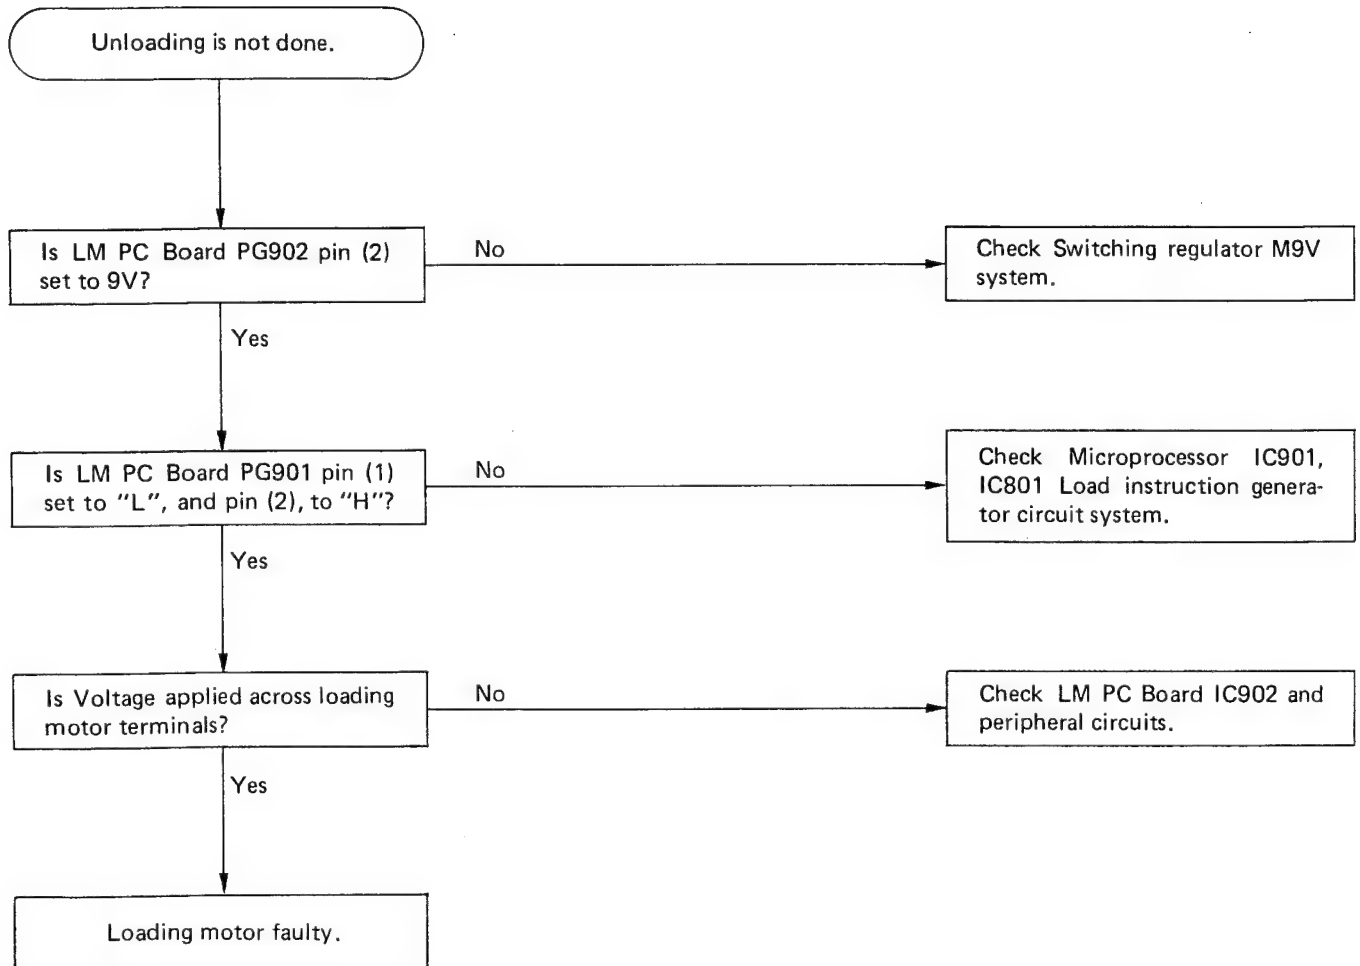

3. SYSTEM CONTROL SYSTEM

3-1. Loading is not done

	Cause	Remedy	Remarks
1	M9V is not output from the regulator PC Board	Replace regulator	
2	Loading motor faulty	Replace motor	
3	Contact of loading motor drive PC Board	Reinsert	
4	Soldering IC801 (51) faulty	Resolder	
5	IC902 TA4309 faulty	Replace	

3-2. Unloading is not done

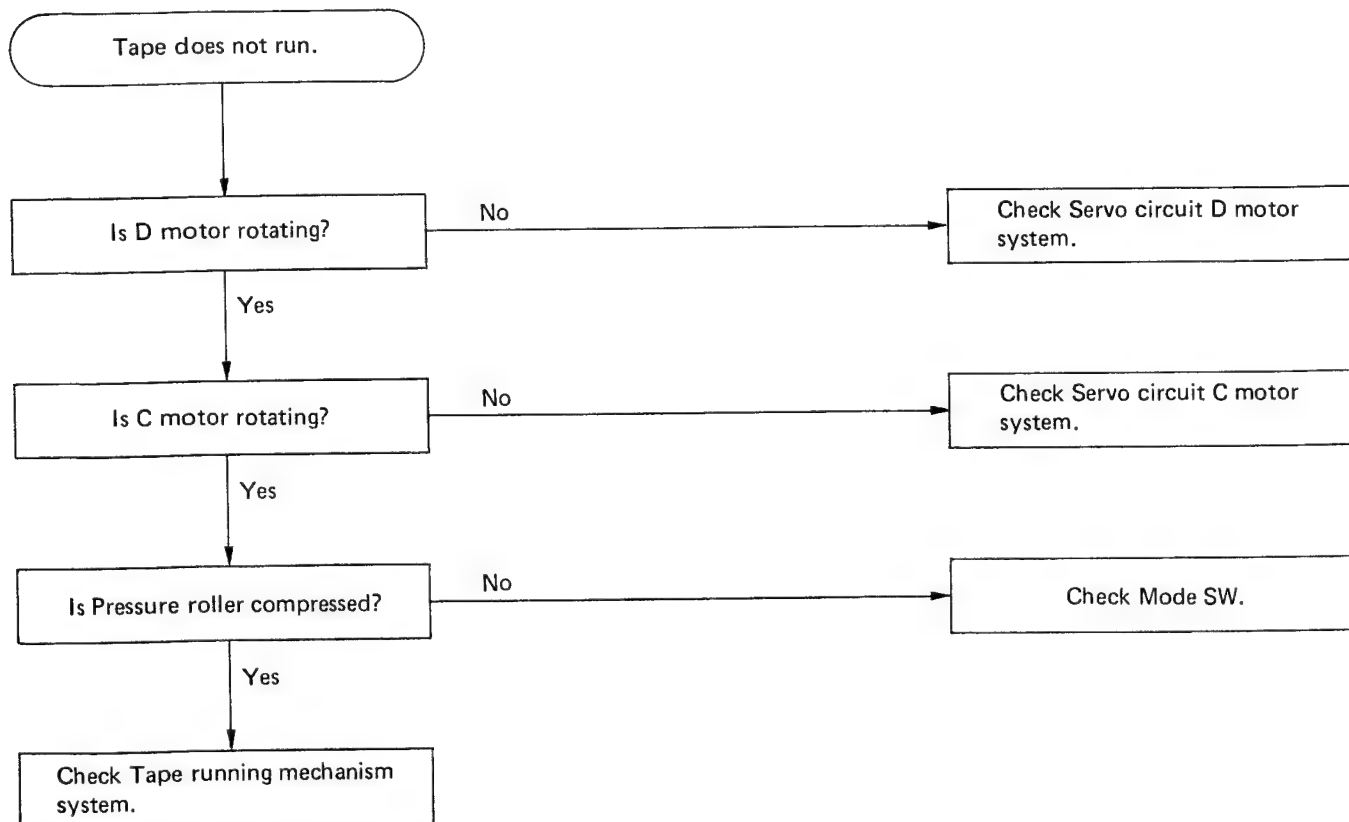

3-3. Unloading is done several seconds after PLAY

	Cause	Remedy	Remarks
1	Pattern incorrect between SYC PC Board IC809 pins (4), (6) and PG801 (B) (2/2)	Replace SYC PC Board	
2	Soldering PG810 (3) faulty	Resolder	
3	PG817 (2), (3) contact faulty	Reinsert	
4	Soldering IC801 (52) faulty	Resolder	
5	Magnet pulley slipped off	Replace	

3-4. Tape does not run

	Cause	Remedy	Remarks
1	Regulator output is not present	Replace regulator	
2	Soldering IC810 faulty	Resolder	
3	Cylinder motor drive PC Board IC682 HA11715 faulty	Replace IC	
4	Loading motor drive PC Board IC902 TA4309 faulty	Replace IC	
5	SYC PC Board IC801 faulty	Replace SYC PC Board	
6	IC501 HA11727 faulty	Replace IC	
7	IC903 DM101A faulty	Replace IC	
8	Q502 2SC202 faulty	Replace transistor	
9	D514 1S2473 faulty	Replace diode	
10	Loading motor faulty	Replace motor	
11	Q507 2SC2021 faulty	Replace transistor	
12	Regulator (7) contact faulty	Resolder	
13	RF converter faulty	Replace converter	
14	Mechanism stage sensor SW PC Board position drifted	Correct position	
15	Capstan motor faulty	Replace motor	
16	Oscillator does not oscillate 4.43 MHz in IC203	Replace IC	

3-5. FF/REW is not done

	Cause	Remedy	Remarks
1	Reel motor faulty	Replace motor	
2	Regulator faulty	Replace regulator	
3	SYC IC810 TA4313A faulty	Replace IC	
4	PG804 contact faulty	Reinsert	
5	IC901 TA4310 faulty	Replace IC	

3-6. INSERT is not possible

	Cause	Remedy	Remarks
1	SYC IC807 μ P D4011 faulty	Replace IC	
2	SYC C810 50V/1 μ F faulty	Replace capacitor	
3	D820 pattern touching	Resolder	
4	Soldering SYC IC801 pin (12) faulty	Resolder	
5	Burrs on INSERT button	Remove Burrs	

3-7. Search faulty (Cue, Rev)

3-8. SLOW/FRAME ADVANCE faulty

3-9. Loading stops intermittently

	Cause	Remedy	Remarks
1	Foreign matter is present in the brake slider	Remove foreign matter	

3-10. Reversing occurs with INSERT

	Cause	Remedy	Remarks
1	Servo PC Board Q708 2SA673C faulty	Replace transistor	
2	Servo PC Board C552 3.3 μ F/50V leaks	Replace capacitor	

3-11. Supply-reel turns with power ON

	Cause	Remedy	Remarks
1	Soldering SYC PG810 (4) faulty	Resolder	
2	SYC IC902 TA4309 faulty	Replace IC	
3	SYC IC810 TA4313A faulty	Replace IC	
4	Soldering SYC IC801 pin (22) loose	Resolder	

3-12. Cylinder turns with power ON

	Cause	Remedy	Remarks
1	IC809 PD4049 faulty	Replace IC	
2	B801 (9) solder touching	Resolder	

3-13. Power turned OFF with FF - REW - STOP

	Cause	Remedy	Remarks
1	Over-discharge level too low	Adjust to $11 \pm 0.05V$ using RT801	

3-14. Cylinder does not turn

	Cause	Remedy	Remarks
1	Soldering SYC IC809 pin (6) faulty	Resolder	
2	Servo PC Board D509 faulty	Replace diode	
3	IC501 HA11727 faulty	Replace IC	

3-15. Remote control does not operate

	Cause	Remedy	Remarks
1	J801 faulty	Replace	
2	Remote control cord disconnected	Replace	

3-16. Does not enter STOP and SLOW modes from remote control

	Cause	Remedy	Remarks
1	IC805 TA4168 faulty	Replace IC	

3-17. Power switched off during operation

	Cause	Remedy	Remarks
1	IC805 TS4168 faulty	Replace IC	

3-18. DUB lamp lights with power ON

	Cause	Remedy	Remarks
1	SYC IC801 HD44820A-17 faulty	Replace IC or PC Board	

3-19. STOP lamp flashes

	Cause	Remedy	Remarks
1	IC806 MB4204 faulty	Replace IC	

3-20. DUB lamp lights due to shock

	Cause	Remedy	Remarks
1	Soldering SYC D801 loose	Resolder	

3-21. Timer-recording is not released

	Cause	Remedy	Remarks
1	Tuner/adaptor faulty	Resolder or replace	

3-22. Does not enter PAUSE mode when camera is connected

	Cause	Remedy	Remarks
1	Camera connector (+) pin pattern faulty	Resolder	

3-23. Battery meter drifted

	Cause	Remedy	Remarks
1	Adjustment drifted	Adjust over-discharge level	

3-24. Picture disappear in PAUSE mode

	Cause	Remedy	Remarks
1	SYC B801 (6), (7) solder touching	Resolder and correct	

3-25. Does not enter PAUSE mode

	Cause	Remedy	Remarks
1	SYC IC801 HD44820A-17 faulty	Replace IC or PC Board	
2	Servo PC Board IC502 BA847 faulty	Replace IC	

3-26. END detection not possible in REC mode

	Cause	Remedy	Remarks
1	Supply end sensor slipped off	Fix sensor with BOND	

3-27. SEARCH operation is not done

	Cause	Remedy	Remarks
1	SYC IC808 μ PD4555 faulty	Replace IC	
2	SYC PG802 contact faulty	Reinsert	

3-28. Battery meter cannot be adjusted

	Cause	Remedy	Remarks
1	SYC PG801B (2/2) faulty	Replace diode	
2	Battery meter faulty	Replace meter	

3-29. Tape does not travel when the unit is used on color TV (CA-554) (tape travels when it is used away from color TV)

	Cause	Remedy	Remarks
1	Horizontal pulse of color TV jumps into CFG of the capstan motor and the motor does not turn	CFG circuit Change Servo PC Board C570, 0.022→0.33 μ	

3-30. Does not stop with counter set to "999"

	Cause	Remedy	Remarks
1	SYC PG811 contact faulty	Reinsert	

3-31. Search, frame advance faulty

	Cause	Remedy	Remarks
1	SYC IC808 μ PD4555 faulty	Replace IC	

4. EE SYSTEM

4-1. E-E picture does not appear

	Cause	Remedy	Remarks
1	RF converter faulty	Replace RF converter	
2	WYC IC202 HT4218 faulty	Replace IC	
3	Q712 faulty	Replace transistor	

4-2. Camera E-E does not appear

	Cause	Remedy	Remarks
1	Servo IC702 TA4328 faulty	Replace IC	

4-3. EE level too low

	Cause	Remedy	Remarks
1	WYC IC202 HT4218 faulty	Replace IC	
2	Servo IC702 TA4328 faulty	Replace IC	

4-4. EE picture does not appear when shock is applied

	Cause	Remedy	Remarks
1	SW regulator faulty	Replace SW regulator	

4-5. Lamp (B) flashes when camera is connected

	Cause	Remedy	Remarks
1	SYC IC803 TA4312A faulty	Replace IC	

4-6. Right-down beat noise appears on the screen

	Cause	Remedy	Remarks
1	Jumping from SW regulator	Move the 12V input line (violet) of the regulator from the parts side to the pattern side	

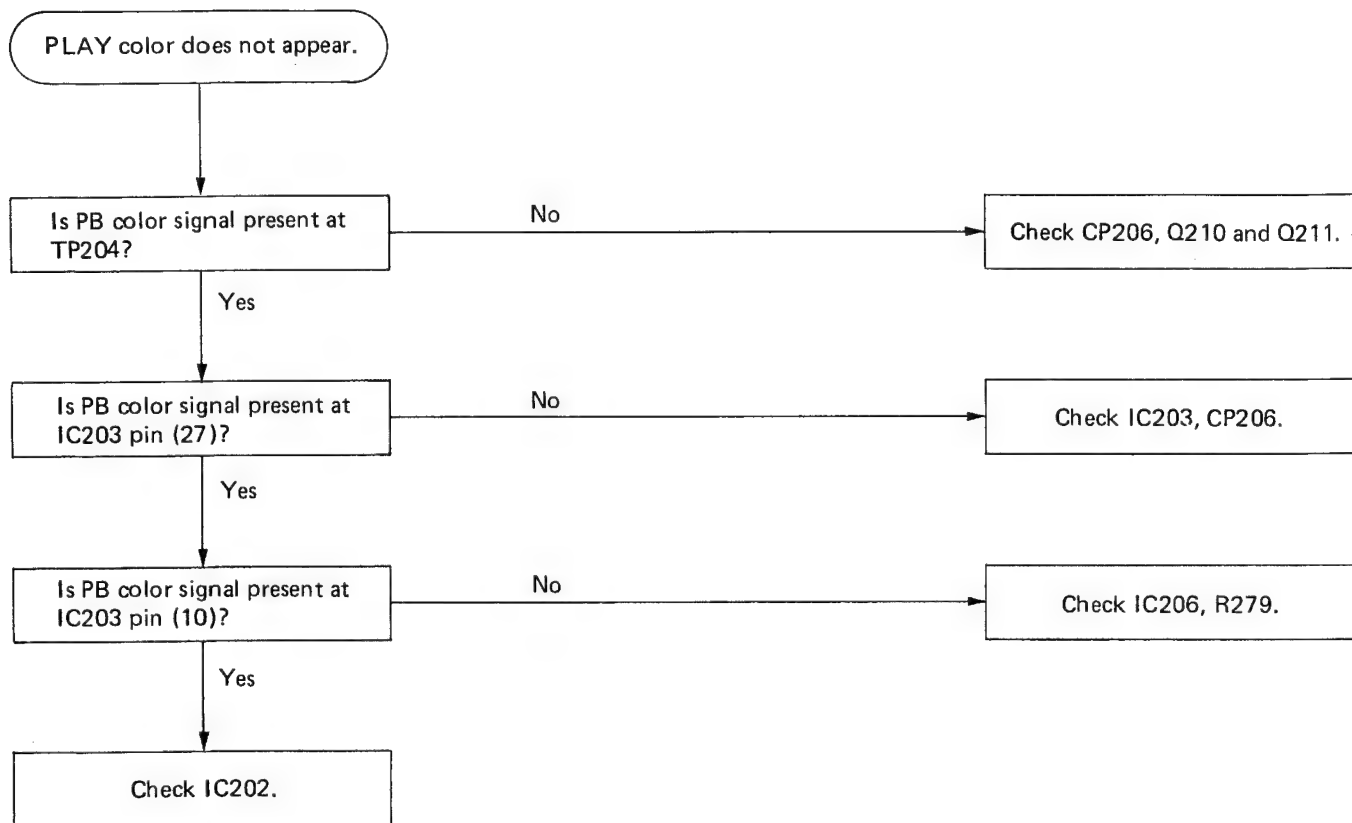

5. PLAY SYSTEM

5-1. PLAY picture does not appear

	Cause	Remedy	Remarks
1	Video head faulty	Replace head	
2	Video head dirty	Clean head	
3	WYC IC201 HA11724 faulty	Replace IC	
4	WYC IC202 HT4218 faulty	Replace IC	
5	WYC IC202 (12), (13) loose solder	Resolder and correct	
6	WYC IC201 (20) loose solder	Resolder and correct	
7	DL202 faulty	Replace filter	

5-2. PLAY color does not appear

	Cause	Remedy	Remarks
1	WYC IC203 TA4219 faulty	Replace IC	
2	WYC CP202 faulty	Replace filter	

5-3. Play picture quality faulty

	Cause	Remedy	Remarks
1	Video head faulty	Replace head	
2	WYC IC201 HA11724 faulty	Replace IC	
3	Tracking VR position faulty	Adjust tracking	
4	Servo IC505 μ PD4011C faulty	Replace IC	
5	Switching point drifted	Adjust	
6	X value drifted	Adjust	
7	Soldering CP202, DL202, faulty or parts faulty	Resolder and correct or replace	

5-4. Horizontal black noise occurs when the tapes which were recorded on this unit or another unit are played back

	Cause	Remedy	Remarks
1	Foreign matter such as magnetic powder, etc. adhere to the tape transport system (especially full erase head), and is magnetized and demagnetized	Clean the tape transport system	

5-5. Black and white inverted

	Cause	Remedy	Remarks
1	Video head faulty	Replace head	
2	Tracking preset adjustment drifted	Adjust RT505 so that the FM envelope waveform is max.	

5-6. Color beat

	Cause	Remedy	Remarks
1	Jumping from the SW regulator	Same as Item 4-6	
2	WYC DL201 faulty	Replace delay line	

5-7. Play sync level too low

	Cause	Remedy	Remarks
1	WYC IC201 HA11724 faulty	Replace IC	

5-8. Drum servo faulty

	Cause	Remedy	Remarks
1	Servo IC501 HA11727 faulty	Replace IC	
2	Wire between drum tack head and servo PC Board disconnected	Rewire	
3	SYC B801 (1) contact faulty	Resolder	
4	SYC IC809 μ PD4049 faulty	Replace IC	

5-9. Noise cannot be reduced in fine slow

	Cause	Remedy	Remarks
1	FM output faulty	Replace and adjust	
2	Cylinder head faulty	Replace head	
3	RT510 adjustment drifted	Adjust	
4	RT511 adjustment drifted	Adjust	

5-10. Capstan servo faulty

	Cause	Remedy	Remarks
1	Capstan motor faulty	Replace motor	
2	Servo D604 DAN201 faulty	Replace diode	
3	Servo Q511 2SC2021 faulty	Replace transistor	
4	IC501 faulty	Replace IC	
5	Solder touching	Resolder	
6	D519, D520 faulty	Replace capacitors	
7	CN501 contact faulty	Correct	

5-11. SW25 does not come out

	Cause	Remedy	Remarks
1	Servo IC505 μ PD4011C faulty	Replace IC	

5-12. Play picture noise

	Cause	Remedy	Remarks
1	Guide roller position drifted	Adjust	
2	Cylinder dirty	Clean it	

5-13. PLAY picture S/N faulty

	Cause	Remedy	Remarks
1	Upper cylinder faulty	Replace	
2	C257 loose solder	Resolder and correct	

5-14. Play picture fluctuates

	Cause	Remedy	Remarks
1	Tuner/adaptor contact faulty	Resolder to correct or replace	

5-15. Play picture abnormal

	Cause	Remedy	Remarks
1	IC501 faulty	Replace	
2	Tach pulse does not come out	Replace Q507	
3	Back-tension faulty	Adjust	

5-16. EE picture during play

	Cause	Remedy	Remarks
1	IC809 faulty	Replace	

5-17. Still picture fluctuates

	Cause	Remedy	Remarks
1	R280 adjustment drifted	Adjust	

5-18. Abnormal sound during play

	Cause	Remedy	Remarks
1	IC401 faulty	Replace	

5-19. Electrostatic noise during play

	Cause	Remedy	Remarks
1	Lower cylinder faulty	Replace	

5-20. Horizontal stripes appear on the monitor when battery is used

	Cause	Remedy	Remarks
1	D806 and collector of Q808 touching and short-circuited	Correct it	

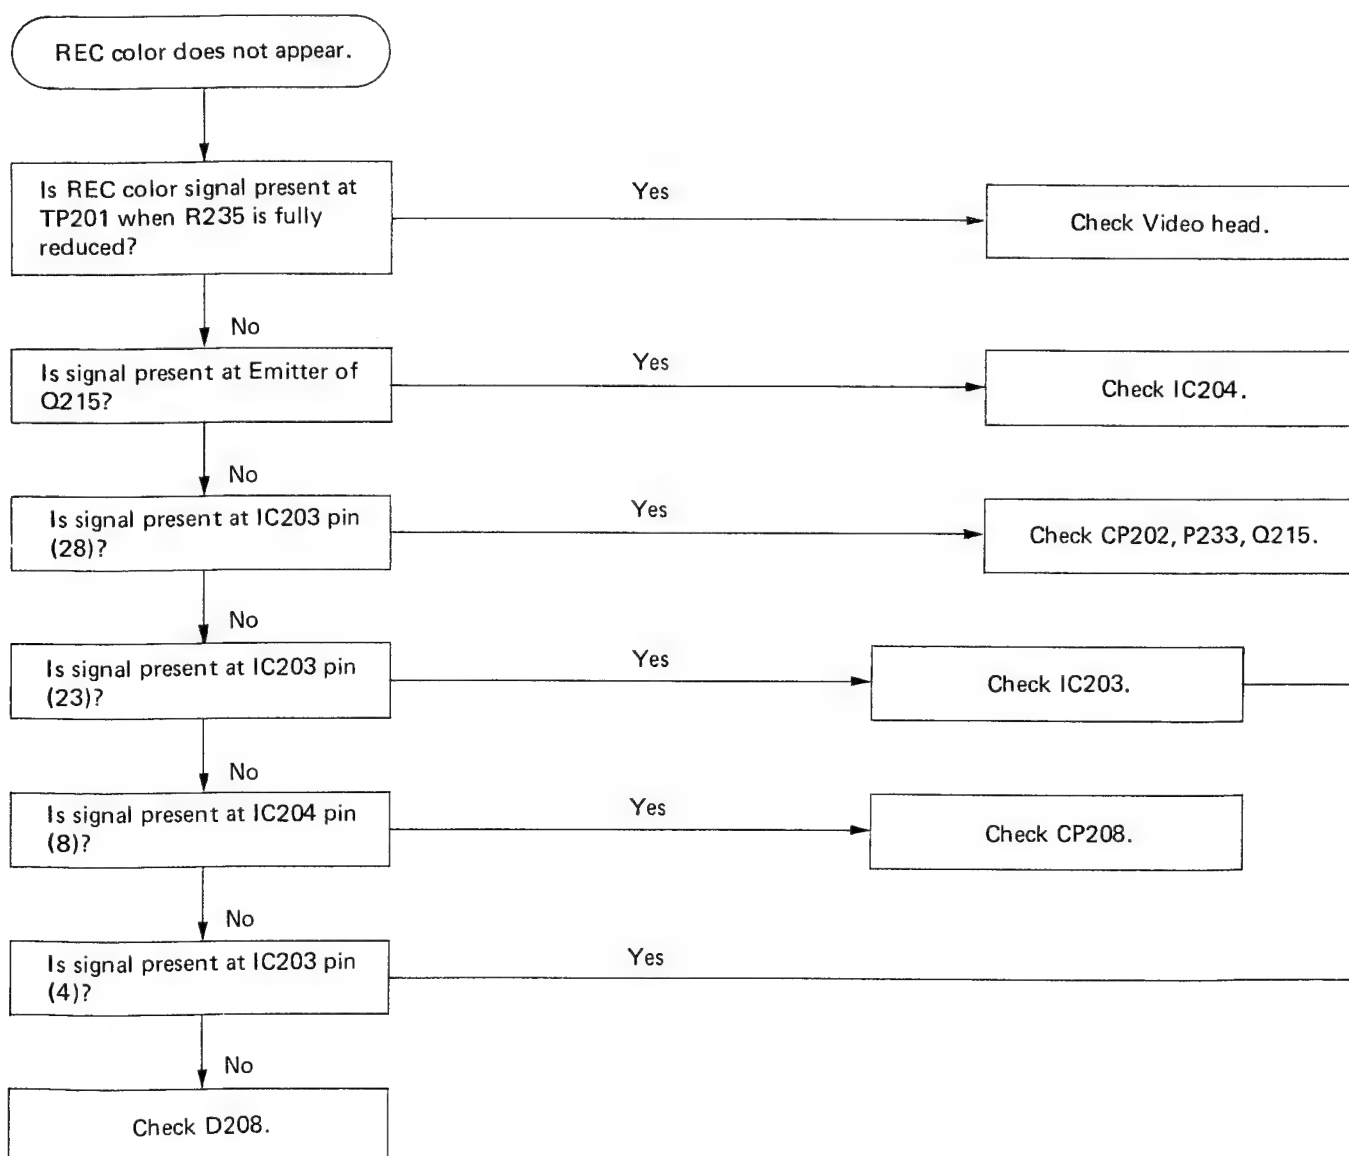

6. RECORDING SYSTEM

6-1. Video-recording is not done

	Cause	Remedy	Remarks
1	Video head faulty	Replace DD cylinder head	
2	Head dirty	Clean head	
3	Head lead wire touches GND	Correct wiring	
4	Q205, Q206 faulty	Replace transistor	

6-2. REC color does not appear

	Cause	Remedy	Remarks
1	WYC IC203 faulty	Replace IC	

6-3. REC FM level too low

	Cause	Remedy	Remarks
1	WYC IC202 HT4218 faulty	Replace	
2	WYC CP202 faulty	Replace high-pass filter	

6-4. Noise occurs during recording

	Cause	Remedy	Remarks
1	Capstan motor faulty	Replace motor	

6-5. Color level too low

	Cause	Remedy	Remarks
1	WYC CP208 faulty	Replace band pass filter	
2	WYC IC203 HT4219 faulty	Replace IC	

6-6. Color noise occurs

	Cause	Remedy	Remarks
1	CP207 faulty	Replace filter	
2	Erase head lead wire contact faulty	Correct it	

6-7. TV recording is not possible

	Cause	Remedy	Remarks
1	Tuner/adaptor faulty	Replace	

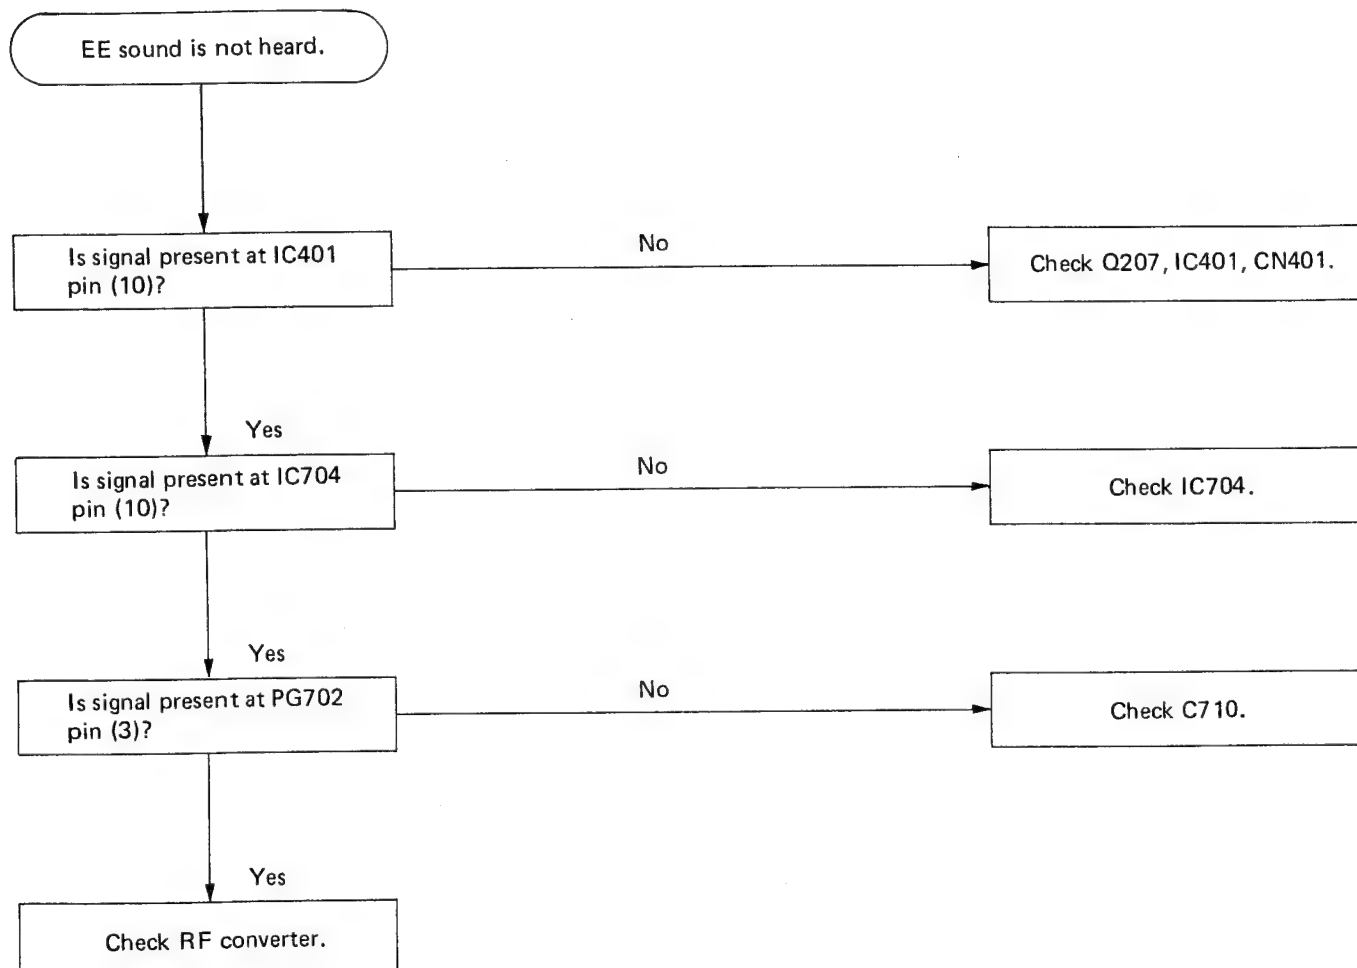

7. AUDIO SYSTEM

7-1. PLAY sound is not heard

	Cause	Remedy	Remarks
1	Audio RL401 contact faulty	Reinsert and correct	
2	SOUND-ON-SOUND S810 faulty	Replace	
3	A/C head faulty	Replace head	
4	Mic jack solder loose	Resolder	
5	Audio IN input loose solder	Resolder and correct	

7-2. EE sound is not heard

	Cause	Remedy	Remarks
1	IC401 (18) and C401 (+) terminal lead touch	Correct it	
2	Servo PG703 contact faulty	Reinsert and correct	
3	SYC IC804 (12), (15) touch pattern	Correct patterns or replace PC Board	

7-3. Recording (sound) is not done

7-4. Abnormal sound during play

	Cause	Remedy	Remarks
1	Erase head lead wire loose solder	Resolder and correct	

7-5. SOUND-ON-SOUND recording not possible (Same for distortion)

	Cause	Remedy	Remarks
1	Bias adjustment faulty	Adjust Audio RT404 to $1.5 \text{ mV} \pm 0.05$	
2	RT404 faulty	Replace VR	

7-6. Audio WOW

	Cause	Remedy	Remarks
1	Capstan motor faulty	Replace motor	

7-7. Sound is not changed over in the PLAY mode

	Cause	Remedy	Remarks
1	Short-circuited between SYC IC809 (15) and PG801 (B), IC809 (12) and PG801 (B)	Replace PC Board	

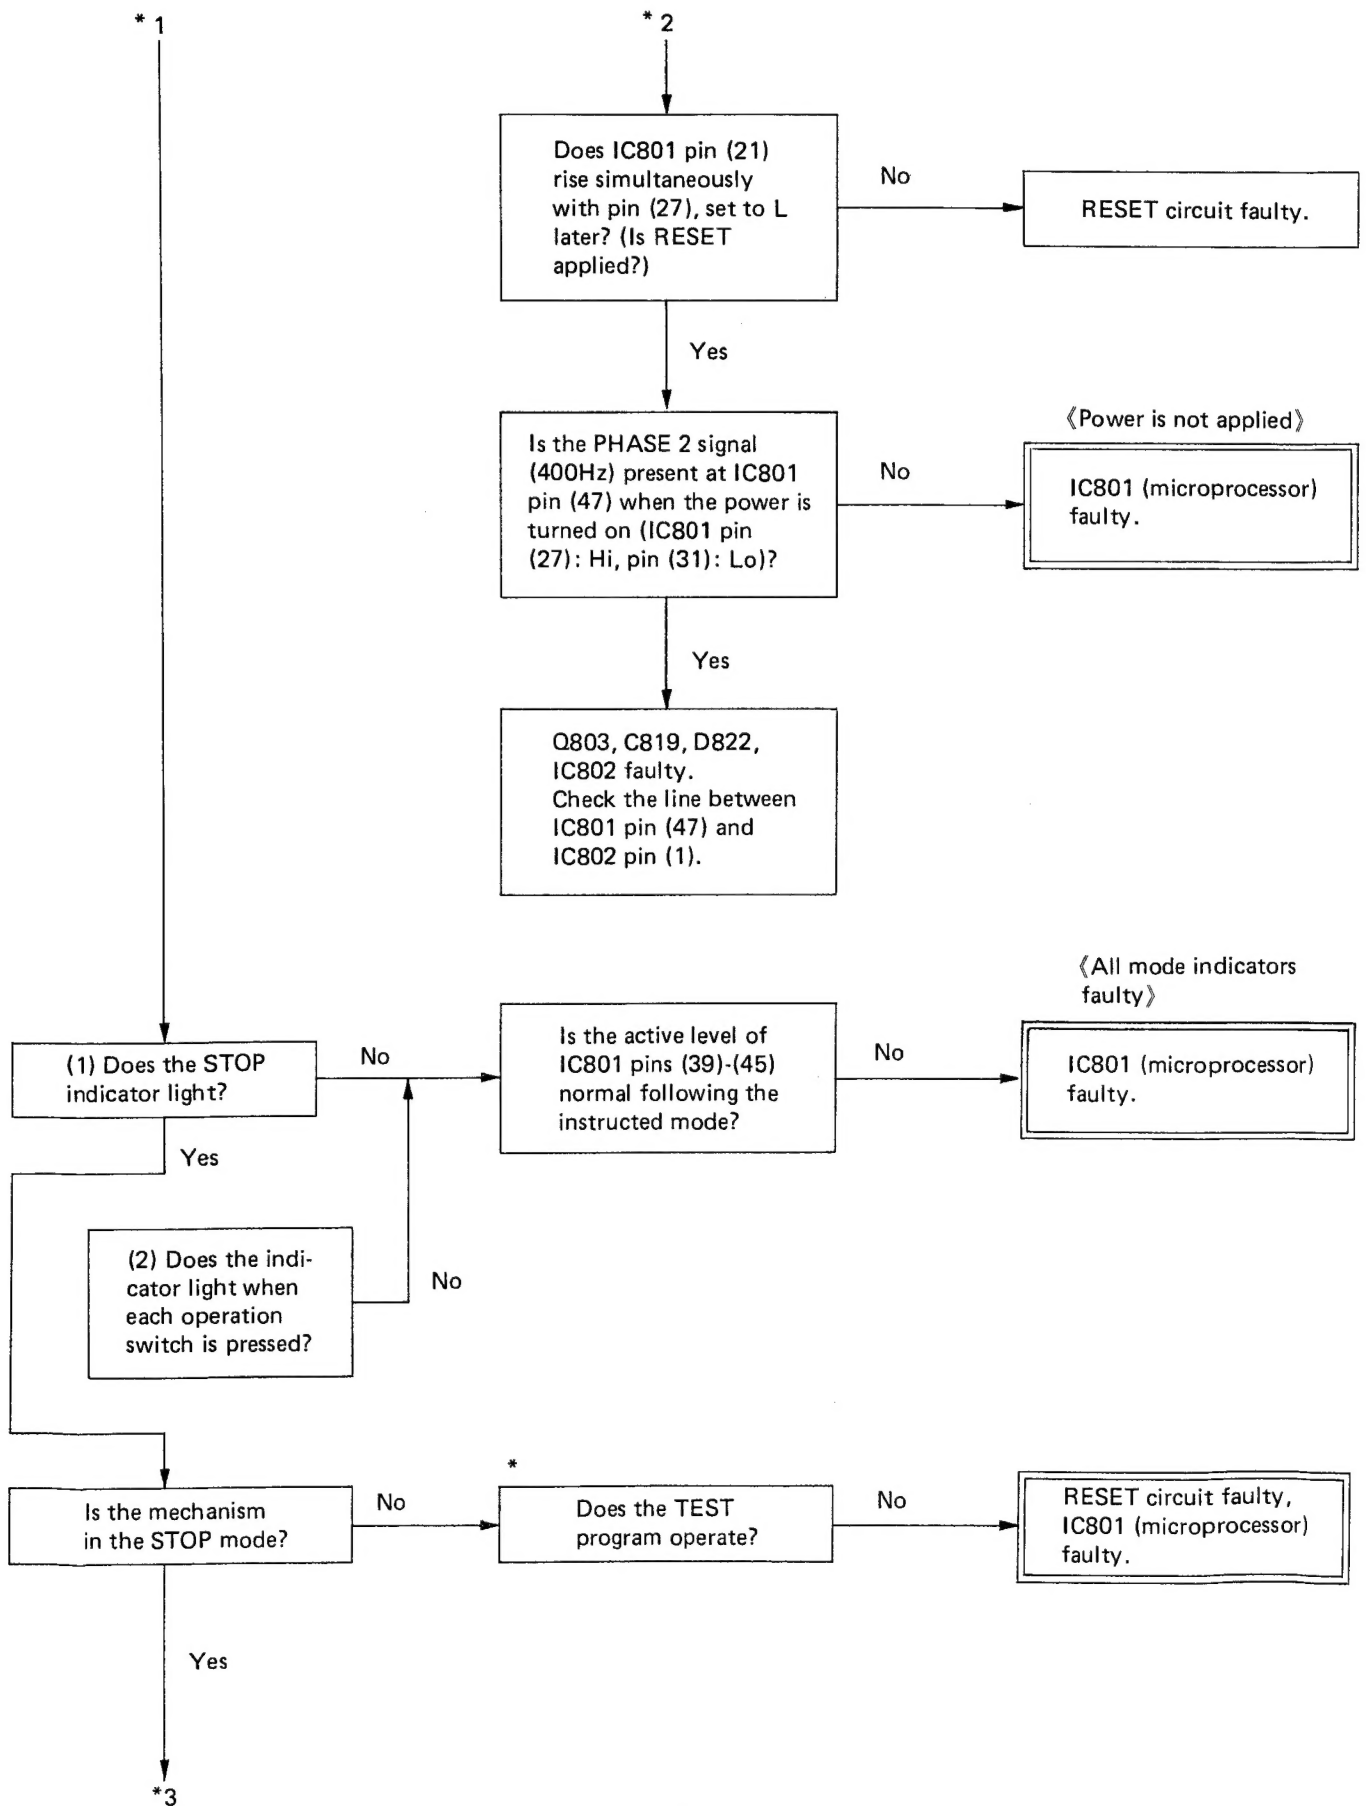

7-8. Record sound cannot be erased by audio dubbing

	Cause	Remedy	Remarks
1	PG451 contact faulty	Reinsert and correct	

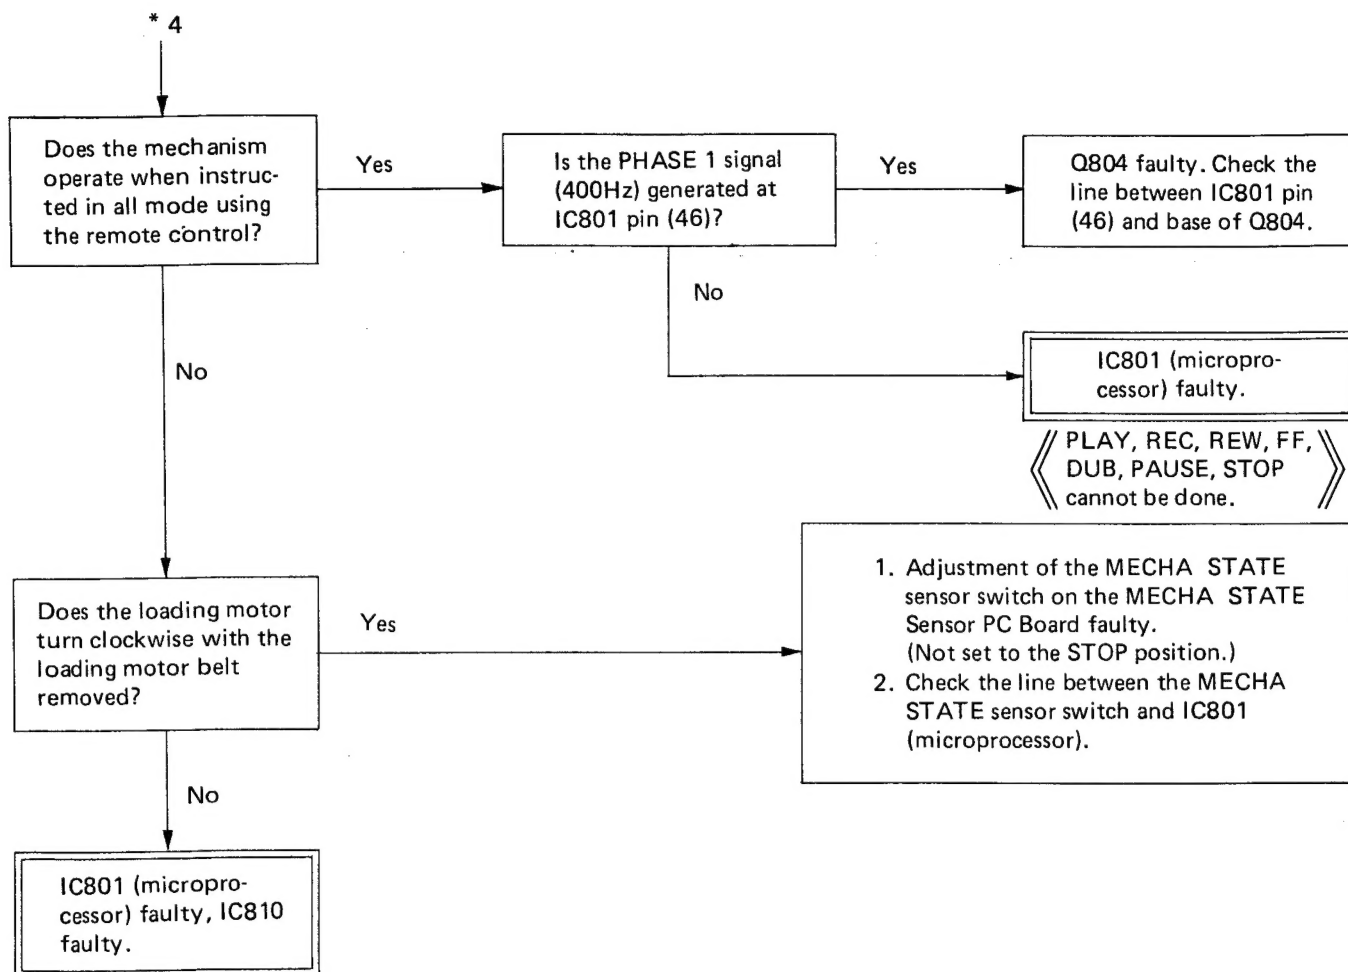

III. μ P TROUBLE-SHOOTING

Note Connect the power (battery VT-BP60), power adaptor and the video electronic tuner (VT-TV65) to the set first. The power voltage at that time should be 11.2V or more.

***TEST program operation method**

Open the cassette holder, set the safety tab switch to ON (REC possible) and then repeat the ON/OFF operation of the power switch: All the mode indicators should light simultaneously for approx. 0.3 sec.

However, the TEST program does not operate when ESS, EST, PHASE 1, sensor LED, Tab SW and Stage SW are not normal.
